Wire wound chip chokes are inductors in which wires are wound on a magnetic core to form an inductive coil. It is characterized by a wide range of inductance (mH~H), high inductance accuracy, low loss (that is, large Q), large allowable current, and manufacturing process. Strong inheritance, simplicity, low cost, etc., but the disadvantage is that it is limited in further miniaturization.

Ferrite choke coils are one of the most efficient and simple filter types and are widely used in many areas of electronic equipment, which is the major driving factor for the market growth. Ferrite chokes are increasingly used in electronic equipment to reduce electromagnetic interference, and due to their many advantages, there is an increasing demand for wire wound ferrite chokes, military and aerospace systems and subsystems, electrical appliances, factories. Surging adoption of ferrite chokes in applications such as automation equipment and many other devices along with increasing use of ferrite chokes in the transportation and automotive industries is expected to improve the growth of the market over the forecast period.
