According to our (Global Info Research) latest study, the global Wired Keyboards market size was valued at US\$ 2469 million in 2024 and is forecast to a readjusted size of USD 2880 million by 2031 with a CAGR of 2.2% during review period.

A wired keyboard means there is a wire connecting your keyboard to your computer. At the end of the wire is a USB plug that goes into a USB port on your computer. Wired keyboards are extremely reliable—there is little that could go wrong with this direct connection.

As a general rule, wired beats wireless for security against remote access or disclosure. Wireless devices can be sniffed and code can be injected if one can decode the signals. You cannot restrict how far radio signals go, so a wired device provides a physically restricted channel.
