Abstracts

According to our (Global Info Research) latest study, the global Wireless Rainfall Monitoring Gauge market size was valued at US\$ 32.80 million in 2025 and is forecast to a readjusted size of US\$ 46.44 million by 2032 with a CAGR of 5.1% during review period.

In 2025, global sales of wireless rainfall monitoring gauges will reach approximately 473,000 units, with an average price of approximately US\$67.40 per unit and a gross profit margin between 25% and 28%. Wireless rainfall monitoring gauges are rainfall monitoring devices based on electronic sensors and digital signal processing technology. They typically consist of a tipping bucket or optical sensing measurement unit, a wireless data transmission module, an LCD display, and a data storage system. They record rainfall volume, intensity, and accumulation data in real time and can be integrated with weather stations, agricultural irrigation systems, or home smart weather platforms, sensors and wireless modules account for over 50% of the total device cost. Compared to traditional mechanical rain gauges, they offer higher accuracy and remote data sharing capabilities, making them widely used in meteorological monitoring, smart agriculture, water resource management, and home gardening. Their upstream market primarily relies on rainfall sensors, RF wireless modules, low-power MCU chips, and waterproof housings. Their downstream customers include agricultural irrigation system integrators, meteorological bureau monitoring stations, environmental research institutions, and consumer smart home manufacturers. Oregon Scientific has an annual production capacity of approximately 84,000 units, primarily targeting the European, American, and Asia-Pacific markets, focusing on home and semi-professional digital self-emptying rain gauges.
