A wireless surveillance camera is a type of security camera that uses wireless technology to transmit video and audio signals to a receiver or a network. It eliminates the need for physical cables to connect the camera to a recording device or monitor, providing flexibility in installation and placement.

Wireless surveillance cameras typically consist of a camera unit with built-in wireless capabilities and a receiver or a network device that receives and processes the video and audio signals. The camera unit captures the video footage and audio, and then wirelessly transmits it to the receiver or network device.

These cameras can be connected to a local network or the internet, allowing users to remotely access and view the live or recorded footage from their smartphones, tablets, or computers. Some wireless surveillance cameras also offer additional features such as motion detection, night vision, and two-way audio communication.

Wireless surveillance cameras are commonly used for home security, monitoring businesses, public spaces, and other areas where video surveillance is needed. They offer convenience, easy installation, and flexibility in terms of camera placement, making them a popular choice for many security applications.
