X-ray detectable surgical sponges are surgical sponges with radio frequency identification (RFID) technology that are used to help medical staff track and manage items such as sponges, textiles and towels used during surgeries. These sponges usually have built-in RFID tags or chips, and their location information can be quickly identified and recorded through an RFID reader. The use of RFID surgical sponges can help improve the safety and efficiency of surgical procedures, reduce the risk of omissions and misuse, and protect the health and safety of patients. At the same time, it also provides medical staff with a more convenient and precise sponge management method.
