According to our (Global Info Research) latest study, the global XLPE Cables market size was valued at US\$ 140120 million in 2024 and is forecast to a readjusted size of USD 194910 million by 2031 with a CAGR of 4.9% during review period.

XLPE cable means cross linked polyethylene insulated aluminium conductor armoured cable. In XLPE cable stranded aluminium conductor is first screened in the form of a semi conducting extrusion which provides a smooth conductor surface and prevents formation of cavities at the surface of the conductor when the cable is subjected to bending. The screened conductor is insulated with extruded XLPE compound. The insulation is further screened with layer of nonmetallic semiconducting material and over that a non magnetic metallic screen in the form of copper or aluminium tape is applied.

The medium voltage cables market is segmented by installation into underground, overhead and submarine. Among these, overhead accounts for the largest market size by value due to its increased usage in developing economies such as Asia-Pacific and LAMEA, on account of lower costs and easier maintenance. Underground cable installation is more prevalent in developed economies, such as Europe, owing to the high population density.
