Zirconia toughened alumina ceramics are a composite material that enhances material properties through phase change toughening mechanisms. They are composed of aluminum oxide (Al_2O_3) and zirconium oxide (ZrO_2). Aluminum oxide is used as a matrix, and zirconium oxide is embedded in it in the form of grains. Usually, the proportion of zirconium oxide is about one-tenth to one-fifth. This material has high density, heat resistance and thermal expansion coefficient at room temperature, and has a wide range of applications.
