SUMMARY

Global Markets Direct's latest Pharmaceutical and Healthcare disease pipeline guide Acute Lymphocytic Leukemia - Drugs In Development, 2021, provides an overview of the Acute Lymphocytic Leukemia (Oncology) pipeline landscape. Acute lymphocytic leukemia (ALL) is the cancer of the white blood cells due to the production of a large number of immature lymphocytes thus blocking the production of normal blood cells. It enters the blood stream and rapidly progress to other parts of the body such as spleen, lymph nodes and liver. Risk factors for ALL include exposure to radiation or chemicals, age, virus infections and genetic factors. Symptoms include anemia, frequent infections, easy bruising, bone pain and breathing problems. Treatment includes chemotherapy, transfusions, transplant and medications.
