SUMMARY

Complement C5 (C3 And PZP Like Alpha 2 Macroglobulin Domain Containing Protein 4 or C5) pipeline Target constitutes close to 45 molecules. Out of which approximately 41 molecules are developed by companies and remaining by the universities/institutes. The latest report Complement C5 - Drugs In Development, 2022, outlays comprehensive information on the Complement C5 (C3 And PZP Like Alpha 2 Macroglobulin Domain Containing Protein 4 or C5) targeted therapeutics, complete with analysis by indications, stage of development, mechanism of action (MoA), route of administration (RoA) and molecule type.

Complement C5 (C3 And PZP Like Alpha 2 Macroglobulin Domain Containing Protein 4 or C5) - Complement component 5 is a protein is encoded by the C5 gene. Activation of C5 by a C5 convertase initiates the spontaneous assembly of the late complement components, C5-C9, into the membrane attack complex. C5b has a transient binding site for C6. The C5b-C6 complex is the foundation upon which the lytic complex is assembled. Binding to the receptor C5AR1 induces a variety of responses including intracellular calcium release, contraction of smooth muscle, increased vascular permeability, and histamine release from mast cells and basophilic leukocytes. C5a is

also a potent chemokine which stimulates the locomotion of polymorphonuclear leukocytes and directs their migration toward sites of inflammation. The molecules developed by companies in Pre-Registration, Phase III, Phase II, Phase I, IND/CTA Filed, Preclinical and Discovery stages are 1, 13, 3, 7, 1, 15 and 1 respectively. Similarly, the universities portfolio in Preclinical and Discovery stages comprises 3 and 1 molecules, respectively.
