Coronary Artery Disease (CAD) (Ischemic Heart Disease) - Pipeline Review, H1 2019

SUMMARY

Global Markets Direct's latest Pharmaceutical and Healthcare disease pipeline guide Coronary Artery Disease (CAD) (Ischemic Heart Disease) - Pipeline Review, H1 2019, provides an overview of the Coronary Artery Disease (CAD) (Ischemic Heart Disease) (Cardiovascular) pipeline landscape.

Coronary artery disease (CAD) is the most common type of heart disease. CAD happens when the arteries that supply blood to heart muscle become hardened and narrowed. This is due to the buildup of cholesterol and other material, called plaque, on their inner walls. This buildup is called atherosclerosis. As it grows, less blood can flow through the arteries. As a result, the heart muscle can't get the blood or oxygen it needs. This can lead to chest pain (angina) or a heart attack. Most heart attacks happen when a blood clot suddenly cuts off the hearts' blood supply, causing permanent heart damage. The most common symptom of coronary artery disease is angina, or chest pain. Other symptoms include shortness of breath, palpitations, a faster heartbeat, weakness or dizziness, nausea and sweating.
