SUMMARY

Global Markets Direct's latest Pharmaceutical and Healthcare disease pipeline guide Endometrial Cancer – Pipeline Review, H1 2020, provides an overview of the Endometrial Cancer (Oncology) pipeline landscape.

Endometrial cancer is cancer that starts in the endometrium, the lining of the uterus (womb). Endometrial cancer is the most common type of uterine cancer. Although the exact cause of endometrial cancer is unknown, increased levels of estrogen appear to play a role. Estrogen helps stimulate the buildup of the lining of the uterus. Symptoms of endometrial cancer include abnormal bleeding from the vagina, including bleeding between periods or spotting/bleeding after menopause, extremely long, heavy or frequent episodes of vaginal bleeding after age 40, lower abdominal pain or pelvic cramping and thin white or clear vaginal discharge after menopause.
