Abstracts

H+ Transporting Two Sector ATPase (F1F0 ATP Synthase or ATP Synthase or Mitochondrial ATPase or Bacterial Ca2+/Mg2+ ATPase or EC 3.6.3.14) - Pipeline Review, H1 2018

SUMMARY

According to the recently published report 'H+ Transporting Two Sector ATPase - Pipeline Review, H1 2018'; H+ Transporting Two Sector ATPase (F1F0 ATP Synthase or ATP Synthase or Mitochondrial ATPase or Bacterial Ca2+/Mg2+ ATPase or EC 3.6.3.14) pipeline Target constitutes close to 5 molecules. Out of which approximately 3 molecules are developed by companies and remaining by the universities/institutes.

H+ Transporting Two Sector ATPase (F1F0 ATP Synthase or ATP Synthase or Mitochondrial ATPase or Bacterial Ca2+/Mg2+ ATPase or EC 3.6.3.14) - ATP synthase (EC 3.6.3.14) is an important enzyme that creates the energy storage molecule adenosine triphosphate (ATP). The majority of cellular energy in the form of adenosine triphosphate (ATP) is synthesized by the ubiquitous F1F0 ATP synthase. Power for ATP synthesis derives from an electrochemical proton (or Na+) gradient, which drives rotation of membranous F0 motor components.

The report 'H+ Transporting Two Sector ATPase - Pipeline Review, H1 2018' outlays comprehensive information on the H+ Transporting Two Sector ATPase (F1F0 ATP Synthase or ATP Synthase or Mitochondrial ATPase or Bacterial Ca2+/Mg2+ ATPase

+44 20 8123 2220
info@marketpublishers.com

or EC 3.6.3.14) targeted therapeutics, complete with analysis by indications, stage of development, mechanism of action (MoA), route of administration (RoA) and molecule type; that are being developed by Companies/Universities.

It also reviews key players involved in H+ Transporting Two Sector ATPase (F1F0 ATP Synthase or ATP Synthase or Mitochondrial ATPase or Bacterial Ca2+/Mg2+ ATPase or EC 3.6.3.14) targeted therapeutics development with respective active and dormant or discontinued projects. Currently, The molecules developed by companies in Pre-Registration, Phase II and Preclinical stages are 1, 1 and 1 respectively. Similarly, the universities portfolio in Preclinical and Discovery stages comprises 1 and 1 molecules, respectively. Report covers products from therapy areas Infectious Disease, Gastrointestinal and Immunology which include indications Tuberculosis, Leprosy, Plaque Psoriasis (Psoriasis Vulgaris), Pulmonary Tuberculosis and Ulcerative Colitis.

Note: Certain content/sections in the pipeline guide may be removed or altered based on the availability and relevance of data.

SCOPE

The report provides a snapshot of the global therapeutic landscape for H+ Transporting Two Sector ATPase (F1F0 ATP Synthase or ATP Synthase or Mitochondrial ATPase or Bacterial Ca2+/Mg2+ ATPase or EC 3.6.3.14)

The report reviews H+ Transporting Two Sector ATPase (F1F0 ATP Synthase or ATP Synthase or Mitochondrial ATPase or Bacterial Ca2+/Mg2+ ATPase or EC 3.6.3.14) targeted therapeutics under development by companies and universities/research institutes based on information derived from company and industry-specific sources

The report covers pipeline products based on various stages of development ranging from pre-registration till discovery and undisclosed stages

The report features descriptive drug profiles for the pipeline products which includes, product description, descriptive MoA, R&D brief, licensing and collaboration details & other developmental activities

The report reviews key players involved in H+ Transporting Two Sector ATPase (F1F0 ATP Synthase or ATP Synthase or Mitochondrial ATPase or Bacterial Ca2+/Mg2+ ATPase or EC 3.6.3.14) targeted therapeutics and enlists all their

+44 20 8123 2220
info@marketpublishers.com

major and minor projects

The report assesses H+ Transporting Two Sector ATPase (F1F0 ATP Synthase or ATP Synthase or Mitochondrial ATPase or Bacterial Ca2+/Mg2+ ATPase or EC 3.6.3.14) targeted therapeutics based on mechanism of action (MoA), route of administration (RoA) and molecule type

The report summarizes all the dormant and discontinued pipeline projects

The report reviews latest news and deals related to H+ Transporting Two Sector ATPase (F1F0 ATP Synthase or ATP Synthase or Mitochondrial ATPase or Bacterial Ca2+/Mg2+ ATPase or EC 3.6.3.14) targeted therapeutics

REASONS TO BUY

Gain strategically significant competitor information, analysis, and insights to formulate effective R&D strategies

Identify emerging players with potentially strong product portfolio and create effective counter-strategies to gain competitive advantage

Identify and understand the targeted therapy areas and indications for H+ Transporting Two Sector ATPase (F1F0 ATP Synthase or ATP Synthase or Mitochondrial ATPase or Bacterial Ca2+/Mg2+ ATPase or EC 3.6.3.14)

Identify the use of drugs for target identification and drug repurposing

Identify potential new clients or partners in the target demographic

Develop strategic initiatives by understanding the focus areas of leading companies

Plan mergers and acquisitions effectively by identifying key players and it’s most promising pipeline therapeutics

Devise corrective measures for pipeline projects by understanding H+ Transporting Two Sector ATPase (F1F0 ATP Synthase or ATP Synthase or Mitochondrial ATPase or Bacterial Ca2+/Mg2+ ATPase or EC 3.6.3.14)

+44 20 8123 2220
info@marketpublishers.com

development landscape

Develop and design in-licensing and out-licensing strategies by identifying prospective partners with the most attractive projects to enhance and expand business potential and scope
