Heparanase (Endo Glucuronidase or Heparanase 1 or HPSE or EC 3.2.1.166) Drugs in Development by Therapy Areas and Indications, Stages, MoA, RoA, Molecule Type and Key Players, 2022 Update

SUMMARY

Heparanase (Endo Glucuronidase or Heparanase 1 or HPSE or EC 3.2.1.166) pipeline Target constitutes close to 15 molecules. Out of which approximately 14 molecules are developed by companies and remaining by the universities/institutes. The latest report Heparanase – Drugs In Development, 2022, outlays comprehensive information on the Heparanase (Endo Glucuronidase or Heparanase 1 or HPSE or EC 3.2.1.166) targeted therapeutics, complete with analysis by indications, stage of development, mechanism of action (MoA), route of administration (RoA) and molecule type.

Heparanase (Endo Glucuronidase or Heparanase 1 or HPSE or EC 3.2.1.166) – Heparanase is an endoglycosidase which cleaves heparan sulfate (HS) and hence participates in degradation and remodeling of the extracellular matrix (ECM). Heparanase is preferentially expressed in human tumors and its over-expression in tumor cells. The enzyme also releases angiogenic factors from the ECM and thereby induces an angiogenic response. Heparanase exhibits also non-enzymatic activities, independent of its involvement in ECM degradation. Among these, are the enhancement of Akt signaling, stimulation of PI3K and p38-dependent endothelial cell migration, and up regulation of VEGF, all contributing to its potent pro-angiogenic

activity. Inhibiting the enzyme is beneficial in treatment of cancer. The molecules developed by companies in Phase II, Preclinical and Discovery stages are 2, 4 and 8 respectively. Similarly, the universities portfolio in Preclinical stages comprises 1 molecule, respectively. Report covers products from therapy areas Oncology, Infectious Disease, Ophthalmology, Hematological Disorders and Immunology which include indications Coronavirus Disease 2019 (COVID-19), Melanoma, Pancreatic Cancer, Retinopathy, Blood Coagulation, Breast Cancer, Dengue Fever, Dry (Atrophic) Macular Degeneration, Head And Neck Cancer, Inflammation, Metastatic Adenocarcinoma of The Pancreas, Metastatic Colorectal Cancer, Metastatic Pancreatic Cancer, Non-Small Cell Lung Cancer, Refractory Multiple Myeloma, Solid Tumor, Triple-Negative Breast Cancer (TNBC), Unspecified Cancer and Wet (Neovascular / Exudative) Macular Degeneration.

Furthermore, this report also reviews key players involved in Heparanase (Endo Glucuronidase or Heparanase 1 or HPSE or EC 3.2.1.166) targeted therapeutics development with respective active and dormant or discontinued projects. Driven by data and information sourced from proprietary databases, company/university websites, clinical trial registries, conferences, SEC filings, investor presentations and featured press releases from company/university sites and industry-specific third party sources.

Note: Certain content / sections in the pipeline guide may be removed or altered based on the availability and relevance of data.

SCOPE

The report provides a snapshot of the global therapeutic landscape for Heparanase (Endo Glucuronidase or Heparanase 1 or HPSE or EC 3.2.1.166)

The report reviews Heparanase (Endo Glucuronidase or Heparanase 1 or HPSE or EC 3.2.1.166) targeted therapeutics under development by companies and universities/research institutes based on information derived from company and industry-specific sources

The report covers pipeline products based on various stages of development ranging from pre-registration till discovery and undisclosed stages

The report features descriptive drug profiles for the pipeline products which includes, product description, descriptive MoA, R&D brief, licensing and collaboration details & other developmental activities

The report reviews key players involved in Heparanase (Endo Glucuronidase or Heparanase 1 or HPSE or EC 3.2.1.166) targeted therapeutics and enlists all their major and minor projects

The report assesses Heparanase (Endo Glucuronidase or Heparanase 1 or HPSE or EC 3.2.1.166) targeted therapeutics based on mechanism of action (MoA), route of administration (RoA) and molecule type

The report summarizes all the dormant and discontinued pipeline projects

The report reviews latest news and deals related to Heparanase (Endo Glucuronidase or Heparanase 1 or HPSE or EC 3.2.1.166) targeted therapeutics

REASONS TO BUY

Gain strategically significant competitor information, analysis, and insights to formulate effective R&D strategies

Identify emerging players with potentially strong product portfolio and create effective counter-strategies to gain competitive advantage

Identify and understand the targeted therapy areas and indications for Heparanase (Endo Glucuronidase or Heparanase 1 or HPSE or EC 3.2.1.166)

Identify the use of drugs for target identification and drug repurposing

Identify potential new clients or partners in the target demographic

Develop strategic initiatives by understanding the focus areas of leading companies

Plan mergers and acquisitions effectively by identifying key players and it's most promising pipeline therapeutics

Devise corrective measures for pipeline projects by understanding Heparanase (Endo Glucuronidase or Heparanase 1 or HPSE or EC 3.2.1.166) development landscape

Develop and design in-licensing and out-licensing strategies by identifying prospective partners with the most attractive projects to enhance and expand business potential and scope

Contents

Introduction

Global Markets Direct Report Coverage

Heparanase (Endo Glucuronidase or Heparanase 1 or HPSE or EC 3.2.1.166) –
