Abstracts

Hepcidin (Liver Expressed Antimicrobial Peptide 1 or Putative Liver Tumor Regressor or HAMP) - Drugs in Development, 2021

SUMMARY

According to the recently published report 'Hepcidin - Drugs in Development, 2021'; Hepcidin (Liver Expressed Antimicrobial Peptide 1 or Putative Liver Tumor Regressor or HAMP) pipeline Target constitutes close to 5 molecules.

Hepcidin (Liver Expressed Antimicrobial Peptide 1 or Putative Liver Tumor Regressor or HAMP) - Hepcidin is a protein encoded by the HAMP gene. It acts by promoting endocytosis and degradation of ferroportin leading to the retention of iron in iron exporting cells and decreased flow of iron into plasma. It controls the major flows of iron into plasma, absorption of dietary iron in the intestine and recycling of iron by macrophages.

The report 'Hepcidin - Drugs in Development, 2021' outlays comprehensive information on the Hepcidin (Liver Expressed Antimicrobial Peptide 1 or Putative Liver Tumor Regressor or HAMP) targeted therapeutics, complete with analysis by indications, stage of development, mechanism of action (MoA), route of administration (RoA) and molecule type; that are being developed by Companies/Universities.

It also reviews key players involved in Hepcidin (Liver Expressed Antimicrobial Peptide 1 or Putative Liver Tumor Regressor or HAMP) targeted therapeutics development with respective active and dormant or discontinued projects. Currently, The molecules

developed by companies in Phase II and Preclinical stages are 1 and 4 respectively. Report covers products from therapy areas Immunology, Genetic Disorders, Hematological Disorders, Oncology and Undisclosed which include indications Acute Inflammation, Anemia, Hemochromatosis, Polycythemia Vera and Unspecified.

Note: Certain content/sections in the pipeline guide may be removed or altered based on the availability and relevance of data.

SCOPE

The report provides a snapshot of the global therapeutic landscape for Hepcidin (Liver Expressed Antimicrobial Peptide 1 or Putative Liver Tumor Regressor or HAMP)

The report reviews Hepcidin (Liver Expressed Antimicrobial Peptide 1 or Putative Liver Tumor Regressor or HAMP) targeted therapeutics under development by companies and universities/research institutes based on information derived from company and industry-specific sources

The report covers pipeline products based on various stages of development ranging from pre-registration till discovery and undisclosed stages

The report features descriptive drug profiles for the pipeline products which includes, product description, descriptive MoA, R&D brief, licensing and collaboration details & other developmental activities

The report reviews key players involved in Hepcidin (Liver Expressed Antimicrobial Peptide 1 or Putative Liver Tumor Regressor or HAMP) targeted therapeutics and enlists all their major and minor projects

The report assesses Hepcidin (Liver Expressed Antimicrobial Peptide 1 or Putative Liver Tumor Regressor or HAMP) targeted therapeutics based on mechanism of action (MoA), route of administration (RoA) and molecule type

The report summarizes all the dormant and discontinued pipeline projects

The report reviews latest news and deals related to Hepcidin (Liver Expressed Antimicrobial Peptide 1 or Putative Liver Tumor Regressor or HAMP) targeted

therapeutics

REASONS TO BUY

Gain strategically significant competitor information, analysis, and insights to formulate effective R&D strategies

Identify emerging players with potentially strong product portfolio and create effective counter-strategies to gain competitive advantage

Identify and understand the targeted therapy areas and indications for Hepcidin (Liver Expressed Antimicrobial Peptide 1 or Putative Liver Tumor Regressor or HAMP) Identify the use of drugs for target identification and drug repurposing

Identify potential new clients or partners in the target demographic

Develop strategic initiatives by understanding the focus areas of leading companies

Plan mergers and acquisitions effectively by identifying key players and it's most promising pipeline therapeutics

Devise corrective measures for pipeline projects by understanding Hepcidin (Liver Expressed Antimicrobial Peptide 1 or Putative Liver Tumor Regressor or HAMP) development landscape

Develop and design in-licensing and out-licensing strategies by identifying prospective partners with the most attractive projects to enhance and expand business potential and scope

Featured News & Press Releases

Mar 22, 2021: Protagonist announces plans to initiate a global phase 3 study for Rusfertide in polycythemia vera following interactions with the U.S. Food & Drug Administration and the European Medicines Agency

Dec 07, 2020: Protagonist announces results of large-scale analysis of current treatment patterns revealing significant opportunity to improve the standard of care for patients with polycythemia vera across Broad population categories

Dec 06, 2020: Protagonist announces updated phase 2 data presented at ASH Annual Meeting supporting long term efficacy of hepcidin mimetic PTG-300 in the treatment of Polycythemia Vera

Dec 02, 2020: Protagonist's Hepcidin Mimetic candidate PTG-300 receives Fast Track Designation from the U.S. Food and Drug Administration for development in the treatment of polycythemia vera

Nov 04, 2020: Protagonist Therapeutics to present updated clinical data for hepcidin mimetic PTG-300 in polycythemia vera at the American Society for Hematology (ASH) 2020 Annual Meeting

Oct 21, 2020: Protagonist Therapeutics receives Orphan Drug Designation from the European Medicines Agency for PTG-300 in Polycythemia Vera

Sep 02, 2020: Protagonist Therapeutics to host PTG-300 opportunity update webinar

Jun 17, 2020: Hepcidin Mimetic PTG-300 receives U.S. FDA Orphan Drug Designation for the treatment of Polycythemia Vera

Jun 04, 2020: Protagonist Therapeutics to present at the 25th European Hematology Association (EHA) Annual Congress

May 07, 2020: Protagonist Therapeutics announces initial phase 2 results with hepcidin mimetic PTG-300 in the treatment of Polycythemia Vera

Jan 07, 2020: Protagonist Therapeutics initiates phase 2 study of novel Hepcidin Mimetic PTG-300 in the treatment of patients with Hereditary Hemochromatosis

Dec 03, 2019: Protagonist Therapeutics announces preliminary phase 2 results with hepcidin mimetic PTG-300 in the treatment of transfusion dependent beta-Thalassemia

Oct 31, 2019: Protagonist doses first patient in Phase II study of PTG-300

Jan 09, 2019: Protagonist Therapeutics Initiates Phase 2 Trial of Novel Hepcidin Mimetic PTG-300 for the Treatment of Patients with Beta Thalassemia

Sep 27, 2018: Protagonist Therapeutics Announces Fast Track Designation Granted by U.S. FDA to Hepcidin Mimetic PTG-300
