Abstracts

Human cytomegalovirus 65 kDa Phosphoprotein (PP65 or 65 kDa Matrix Phosphoprotein or Tegument Protein UL83 or UL83) Drugs in Development by Therapy Areas and Indications, Stages, MoA, RoA, Molecule Type and Key Players, 2022 Update

SUMMARY

Human cytomegalovirus 65 kDa Phosphoprotein (PP65 or 65 kDa Matrix Phosphoprotein or Tegument Protein UL83 or UL83) - 65-kDa cytosolic phosphoprotein (pp65) counteracts the host antiviral immune response when activated and phosphorylated and by preventing IRF3 from entering the nucleus. It participates in the transactivation of viral major immediate-early genes by the recruitment of host IFI16 to the promoter of these genes.

Human cytomegalovirus 65 kDa Phosphoprotein (PP65 or 65 kDa Matrix Phosphoprotein or Tegument Protein UL83 or UL83) pipeline Target constitutes close to 11 molecules. Out of which approximately 9 molecules are developed by companies and remaining by the universities/institutes. The molecules developed by companies in Phase II, Phase I and Preclinical stages are 4, 2 and 3 respectively. Similarly, the universities portfolio in Phase II and Preclinical stages comprises 1 and 1 molecules, respectively. Report covers products from therapy areas Infectious Disease, Oncology and Immunology which include indications Cytomegalovirus (HHV-5) Infections,

Glioblastoma Multiforme (GBM), Acute Lymphoblastic Lymphoma, Acute Myelocytic Leukemia (AML, Acute Myeloblastic Leukemia), B-Cell Non-Hodgkin Lymphoma, Chronic Lymphocytic Leukemia (CLL), Chronic Myelocytic Leukemia (CML, Chronic Myeloid Leukemia), Diffuse Large B-Cell Lymphoma, High-Grade Glioma, Hodgkin Lymphoma (B-Cell Hodgkin Lymphoma), Human Immunodeficiency Virus (HIV) Infections (AIDS), Kidney Transplant Rejection, Malignant Glioma, Mantle Cell Lymphoma, Medulloblastoma, Multiple Myeloma (Kahler Disease), Myelodysplastic Syndrome, Myelofibrosis, Myeloproliferative Disorders, Non-Hodgkin Lymphoma, Recurrent Glioblastoma Multiforme (GBM), Recurrent Malignant Glioma and Recurrent Medulloblastoma.

The latest report Human cytomegalovirus 65 kDa Phosphoprotein - Drugs In Development, 2022, outlays comprehensive information on the Human cytomegalovirus 65 kDa Phosphoprotein (PP65 or 65 kDa Matrix Phosphoprotein or Tegument Protein UL83 or UL83) targeted therapeutics, complete with analysis by indications, stage of development, mechanism of action (MoA), route of administration (RoA) and molecule type. It also reviews key players involved in Human cytomegalovirus 65 kDa Phosphoprotein (PP65 or 65 kDa Matrix Phosphoprotein or Tegument Protein UL83 or UL83) targeted therapeutics development with respective active and dormant or discontinued projects.

The report is built using data and information sourced from proprietary databases, company/university websites, clinical trial registries, conferences, SEC filings, investor presentations and featured press releases from company/university sites and industry-specific third party sources.

Note: Certain content/sections in the pipeline guide may be removed or altered based on the availability and relevance of data.

SCOPE

The report provides a snapshot of the global therapeutic landscape for Human cytomegalovirus 65 kDa Phosphoprotein (PP65 or 65 kDa Matrix Phosphoprotein or Tegument Protein UL83 or UL83)

The report reviews Human cytomegalovirus 65 kDa Phosphoprotein (PP65 or 65 kDa Matrix Phosphoprotein or Tegument Protein UL83 or UL83) targeted therapeutics under development by companies and universities/research institutes based on information derived from company and industry-specific

sources

The report covers pipeline products based on various stages of development ranging from pre-registration till discovery and undisclosed stages

The report features descriptive drug profiles for the pipeline products which includes, product description, descriptive MoA, R&D brief, licensing and collaboration details & other developmental activities

The report reviews key players involved in Human cytomegalovirus 65 kDa Phosphoprotein (PP65 or 65 kDa Matrix Phosphoprotein or Tegument Protein UL83 or UL83) targeted therapeutics and enlists all their major and minor projects

The report assesses Human cytomegalovirus 65 kDa Phosphoprotein (PP65 or 65 kDa Matrix Phosphoprotein or Tegument Protein UL83 or UL83) targeted therapeutics based on mechanism of action (MoA), route of administration (RoA) and molecule type

The report summarizes all the dormant and discontinued pipeline projects

The report reviews latest news and deals related to Human cytomegalovirus 65 kDa Phosphoprotein (PP65 or 65 kDa Matrix Phosphoprotein or Tegument Protein UL83 or UL83) targeted therapeutics

REASONS TO BUY

Gain strategically significant competitor information, analysis, and insights to formulate effective R&D strategies

Identify emerging players with potentially strong product portfolio and create effective counter-strategies to gain competitive advantage

Identify and understand the targeted therapy areas and indications for Human cytomegalovirus 65 kDa Phosphoprotein (PP65 or 65 kDa Matrix Phosphoprotein or Tegument Protein UL83 or UL83)

Identify the use of drugs for target identification and drug repurposing

Identify potential new clients or partners in the target demographic

Develop strategic initiatives by understanding the focus areas of leading companies

Plan mergers and acquisitions effectively by identifying key players and it's most promising pipeline therapeutics

Devise corrective measures for pipeline projects by understanding Human cytomegalovirus 65 kDa Phosphoprotein (PP65 or 65 kDa Matrix Phosphoprotein or Tegument Protein UL83 or UL83) development landscape

Develop and design in-licensing and out-licensing strategies by identifying prospective partners with the most attractive projects to enhance and expand business potential and @Scope

Contents

Introduction

Global Markets Direct Report Coverage

Human cytomegalovirus 65 kDa Phosphoprotein (PP65 or 65 kDa Matrix Phosphoprotein or Tegument Protein UL83 or UL83) - Overview

Human cytomegalovirus 65 kDa Phosphoprotein (PP65 or 65 kDa Matrix Phosphoprotein or Tegument Protein UL83 or UL83) - Therapeutics Development

Products under Development by Stage of Development

Products under Development by Therapy Area

Products under Development by Indication
