## Abstracts

Hypercholesterolemia Drugs in Development by Stages, Target, MoA, RoA, Molecule Type and Key Players, 2022 Update

### SUMMARY

Global Markets Direct's latest Pharmaceutical and Healthcare disease pipeline guide Hypercholesterolemia - Drugs In Development, 2022, provides an overview of the Hypercholesterolemia (Metabolic Disorders) pipeline landscape.

Hypercholesterolemia is a condition characterized by very high levels of cholesterol in the blood. This leads in formation of sticky deposits (called plaque) along the artery walls. Plaque can completely block blood flow through an artery, causing heart attack or stroke. Two forms of the condition exist heterozygous familial hypercholesterolemia (HeFH) and homozygous familial hypercholesterolemia (HoFH). Risk factors include obese, family history, high blood pressure, smoking and diabetes. Treatment includes statins, bile acid sequestrants, fibric acid derivatives and cholesterol absorption inhibitors

### REPORT HIGHLIGHTS

Global Markets Direct's Pharmaceutical and Healthcare latest pipeline guide Hypercholesterolemia - Drugs In Development, 2022, provides comprehensive information on the therapeutics under development for Hypercholesterolemia (Metabolic Disorders), complete with analysis by stage of development, drug target, mechanism of action (MoA), route of administration (RoA) and molecule type. The guide covers the

descriptive pharmacological action of the therapeutics, its complete research and development history and latest news and press releases.

The Hypercholesterolemia (Metabolic Disorders) pipeline guide also reviews of key players involved in therapeutic development for Hypercholesterolemia and features dormant and discontinued projects. The guide covers therapeutics under Development by Companies/Universities/Institutes, the molecules developed by Companies in Pre-Registration, Filing rejected/Withdrawn, Phase III, Phase II, Phase I, IND/CTA Filed, Preclinical, Discovery and Unknown stages are 2, 1, 18, 16, 14, 4, 27, 10 and 6 respectively. Similarly, the Universities portfolio in Phase 0, Preclinical and Discovery stages comprises 1, 8 and 1 molecules, respectively.

Hypercholesterolemia (Metabolic Disorders) pipeline guide helps in identifying and tracking emerging players in the market and their portfolios, enhances decision making capabilities and helps to create effective counter strategies to gain competitive advantage. The guide is built using data and information sourced from Global Markets Direct's proprietary databases, company/university websites, clinical trial registries, conferences, SEC filings, investor presentations and featured press releases from company/university sites and industry-specific third party sources. Additionally, various dynamic tracking processes ensure that the most recent developments are captured on a real time basis.

**Note:** Certain content/sections in the pipeline guide may be removed or altered based on the availability and relevance of data.

## SCOPE

The pipeline guide provides a snapshot of the global therapeutic landscape of Hypercholesterolemia (Metabolic Disorders).

The pipeline guide reviews pipeline therapeutics for Hypercholesterolemia (Metabolic Disorders) by companies and universities/research institutes based on information derived from company and industry-specific sources.

The pipeline guide covers pipeline products based on several stages of development ranging from pre-registration till discovery and undisclosed stages.

The pipeline guide features descriptive drug profiles for the pipeline products which comprise, product description, descriptive licensing and collaboration

details, R&D brief, MoA & other developmental activities.

The pipeline guide reviews key companies involved in Hypercholesterolemia (Metabolic Disorders) therapeutics and enlists all their major and minor projects.

The pipeline guide evaluates Hypercholesterolemia (Metabolic Disorders) therapeutics based on mechanism of action (MoA), drug target, route of administration (RoA) and molecule type.

The pipeline guide encapsulates all the dormant and discontinued pipeline projects.

The pipeline guide reviews latest news related to pipeline therapeutics for Hypercholesterolemia (Metabolic Disorders)

## **REASONS TO BUY**

Procure strategically important competitor information, analysis, and insights to formulate effective R&D strategies.

Recognize emerging players with potentially strong product portfolio and create effective counter-strategies to gain competitive advantage.

Find and recognize significant and varied types of therapeutics under development for Hypercholesterolemia (Metabolic Disorders).

Classify potential new clients or partners in the target demographic.

Develop tactical initiatives by understanding the focus areas of leading companies.

Plan mergers and acquisitions meritoriously by identifying key players and it's most promising pipeline therapeutics.

Formulate corrective measures for pipeline projects by understanding Hypercholesterolemia (Metabolic Disorders) pipeline depth and focus of Indication therapeutics.

Develop and design in-licensing and out-licensing strategies by identifying prospective partners with the most attractive projects to enhance and expand business potential and scope.

Adjust the therapeutic portfolio by recognizing discontinued projects and understand from the know-how what drove them from pipeline.

Featured News & Press Releases

Sep 23, 2022: Ionis provides update on development program evaluating PCSK9 antisense medicine for the treatment of hypercholesterolemia

Sep 21, 2022: Verve Therapeutics announces clearance of clinical trial authorisation application by the United Kingdom Medicines and Healthcare Products Regulatory Agency for VERVE-101 in patients with heterozygous familial hypercholesterolemia

Sep 13, 2022: MediciNova receives a notice of allowance for a new patent covering MN-001 and MN-002 for the treatment of hypertriglyceridemia, hypercholesterolemia, and hyperlipoproteinemia in Canada

Aug 29, 2022: New Amgen data at ESC 2022 show long-term LDL-C lowering with REPATHA (evolocumab) was well-tolerated for more than 8 years

Aug 29, 2022: NewAmsterdam Pharma showcases leadership in cardiometabolic disease treatment in multiple presentations at ESC congress 2022

Aug 29, 2022: Verve Therapeutics highlights preclinical data supporting nomination of VERVE-201 ANGPTL3 product candidate at the European Society of Cardiology 2022 Congress

Aug 29, 2022: AMGEN to present new data at ESC Congress 2022 highlighting up To 8.5 years of Repatha (Evolocumab) safety and tolerability data in high-risk ASCVD

patient populations

Aug 29, 2022: Latest simulation analyses from the SANTORINI registry indicates that adding bempedoic acid in the lipid lowering treatment algorithm might help more patients achieve LDL-C recommended goals

Aug 02, 2022: Vaxxinity's anti-PCSK9 candidate demonstrates durable LDL cholesterol lowering in non-human primates

Jul 28, 2022: NewAmsterdam pharma doses first patient in phase 3 BROOKLYN clinical trial evaluating obicetrapib in patients with heterozygous familial hypercholesterolemia

Jul 12, 2022: Verve Therapeutics doses first human with an investigational in vivo base editing medicine, VERVE-101, as a potential treatment for heterozygous familial hypercholesterolemia

Jun 29, 2022: Nyrada announces update on Cholesterol-Lowering Program

Jun 13, 2022: Innovent announces the NMPA acceptance of the New Drug Application for Tafolecimab Injection (anti-PCSK-9 antibody)

May 31, 2022: First Subject dosed in Lipigon's phase I clinical study with antisense oligonucleotide Candidate Derived from Secarna Pharmaceutical's LNAplus(TM) Technology Platform

May 21, 2022: Evkeeza (evinacumab) phase 3 trial demonstrates 48% LDL-C reduction in children with ultra-rare form of high cholesterol
