Interleukin 1 (IL1) - Drugs in Development, 2021

### SUMMARY

According to the recently published report 'Interleukin 1 - Drugs in Development, 2021'; Interleukin 1 (IL1) pipeline Target constitutes close to 36 molecules. Out of which approximately 35 molecules are developed by companies and remaining by the universities/institutes.

Interleukin 1 (IL1) - Interleukin-1 is a cytokine which plays an important role regulation of immune and inflammatory responses. It helps leukocytes pass through blood vessel walls to sites of infection and causes fever by affecting areas of the brain that control body temperature. There are two forms of interleukin-1, alpha and beta. IL-1 stimulates thymocyte proliferation by inducing IL-2 release, B-cell maturation and proliferation, and fibroblast growth factor activity.

The report 'Interleukin 1 - Drugs in Development, 2021' outlays comprehensive information on the Interleukin 1 (IL1) targeted therapeutics, complete with analysis by indications, stage of development, mechanism of action (MoA), route of administration (RoA) and molecule type; that are being developed by Companies/Universities.

It also reviews key players involved in Interleukin 1 (IL1) targeted therapeutics development with respective active and dormant or discontinued projects. Currently, The molecules developed by companies in Phase III, Phase II, Phase I, Preclinical, Discovery and Unknown stages are 4, 6, 4, 17, 3 and 1 respectively. Similarly, the universities portfolio in Preclinical stages comprises 1 molecules, respectively.
