Abstracts

Nicotinamide Phosphoribosyltransferase (Visfatin or Pre B Cell Colony Enhancing Factor 1 or NAMPT or EC 2.4.2.12) - Pipeline Review, H1 2018

SUMMARY

According to the recently published report 'Nicotinamide Phosphoribosyltransferase - Pipeline Review, H1 2018'; Nicotinamide Phosphoribosyltransferase (Visfatin or Pre B Cell Colony Enhancing Factor 1 or NAMPT or EC 2.4.2.12) pipeline Target constitutes close to 12 molecules. Out of which approximately 10 molecules are developed by companies and remaining by the universities/institutes.

Nicotinamide Phosphoribosyltransferase (Visfatin or Pre B Cell Colony Enhancing Factor 1 or NAMPT or EC 2.4.2.12) - Nicotinamide phosphoribosyltransferase (NAMPTase) is an enzyme encoded by the PBEF1 gene. This protein has also been reported to be a cytokine (PBEF) that promotes B cell maturation and inhibits neutrophil apoptosis.

NAMPTase catalyzes the condensation of nicotinamide with 5-phosphoribosyl-1-pyrophosphate to yield nicotinamide mononucleotide, one step in the biosynthesis of nicotinamide adenine dinucleotide. The protein is an adipokine that is localized to the bloodstream and has various functions, including the promotion of vascular smooth muscle cell maturation and inhibition of neutrophil apoptosis. It also activates insulin receptor and has insulin-mimetic effects, lowering blood glucose and improving insulin sensitivity.

The report 'Nicotinamide Phosphoribosyltransferase - Pipeline Review, H1 2018' outlays comprehensive information on the Nicotinamide Phosphoribosyltransferase (Visfatin or Pre B Cell Colony Enhancing Factor 1 or NAMPT or EC 2.4.2.12) targeted therapeutics, complete with analysis by indications, stage of development, mechanism of action (MoA), route of administration (RoA) and molecule type; that are being developed by Companies/Universities.

It also reviews key players involved in Nicotinamide Phosphoribosyltransferase (Visfatin or Pre B Cell Colony Enhancing Factor 1 or NAMPT or EC 2.4.2.12) targeted therapeutics development with respective active and dormant or discontinued projects. Currently, The molecules developed by companies in Phase II, Preclinical and Discovery stages are 1, 8 and 1 respectively.

Similarly, the universities portfolio in Preclinical stages comprises 2 molecules, respectively. Report covers products from therapy areas Oncology, Central Nervous System, Cardiovascular, Immunology and Respiratory which include indications Acute Lymphocytic Leukemia (ALL, Acute Lymphoblastic Leukemia), Acute Myelocytic Leukemia (AML, Acute Myeloblastic Leukemia), Age Related Memory Impairment, Amyotrophic Lateral Sclerosis, Depression, Multiple Myeloma (Kahler Disease), Parkinson's Disease, Acute Lung Injury, Breast Cancer, Colon Cancer, Idiopathic Pulmonary Fibrosis, Inflammation, Leukemias, Lung Cancer, Nerve Injury, Non-Hodgkin Lymphoma, Pain, Pancreatic Cancer, Pulmonary Arterial Hypertension, Renal Cell Carcinoma, Sarcomas, Solid Tumor and Waldenstrom Macroglobulinemia.

Note: Certain content/sections in the pipeline guide may be removed or altered based on the availability and relevance of data.

SCOPE

The report provides a snapshot of the global therapeutic landscape for Nicotinamide Phosphoribosyltransferase (Visfatin or Pre B Cell Colony Enhancing Factor 1 or NAMPT or EC 2.4.2.12)

The report reviews Nicotinamide Phosphoribosyltransferase (Visfatin or Pre B Cell Colony Enhancing Factor 1 or NAMPT or EC 2.4.2.12) targeted therapeutics under development by companies and universities/research institutes based on information derived from company and industry-specific sources

The report covers pipeline products based on various stages of development ranging from pre-registration till discovery and undisclosed stages

The report features descriptive drug profiles for the pipeline products which includes, product description, descriptive MoA, R&D brief, licensing and collaboration details & other developmental activities

The report reviews key players involved in Nicotinamide Phosphoribosyltransferase (Visfatin or Pre B Cell Colony Enhancing Factor 1 or NAMPT or EC 2.4.2.12) targeted therapeutics and enlists all their major and minor projects

The report assesses Nicotinamide Phosphoribosyltransferase (Visfatin or Pre B Cell Colony Enhancing Factor 1 or NAMPT or EC 2.4.2.12) targeted therapeutics based on mechanism of action (MoA), route of administration (RoA) and molecule type

The report summarizes all the dormant and discontinued pipeline projects

The report reviews latest news and deals related to Nicotinamide Phosphoribosyltransferase (Visfatin or Pre B Cell Colony Enhancing Factor 1 or NAMPT or EC 2.4.2.12) targeted therapeutics

REASONS TO BUY

Gain strategically significant competitor information, analysis, and insights to formulate effective R&D strategies

Identify emerging players with potentially strong product portfolio and create effective counter-strategies to gain competitive advantage

Identify and understand the targeted therapy areas and indications for Nicotinamide Phosphoribosyltransferase (Visfatin or Pre B Cell Colony Enhancing Factor 1 or NAMPT or EC 2.4.2.12)

Identify the use of drugs for target identification and drug repurposing

Identify potential new clients or partners in the target demographic

Develop strategic initiatives by understanding the focus areas of leading companies

Plan mergers and acquisitions effectively by identifying key players and it's most promising pipeline therapeutics

Devise corrective measures for pipeline projects by understanding Nicotinamide Phosphoribosyltransferase (Visfatin or Pre B Cell Colony Enhancing Factor 1 or NAMPT or EC 2.4.2.12) development landscape

Develop and design in-licensing and out-licensing strategies by identifying prospective partners with the most attractive projects to enhance and expand business potential and @Scope

Contents

Introduction

Global Markets Direct Report Coverage

Nicotinamide Phosphoribosyltransferase (Visfatin or Pre B Cell Colony Enhancing Factor 1 or NAMPT or EC 2.4.2.12) - Overview

Nicotinamide Phosphoribosyltransferase (Visfatin or Pre B Cell Colony Enhancing Factor 1 or NAMPT or EC 2.4.2.12) - Therapeutics Development

Products under Development by Stage of Development

Products under Development by Therapy Area

Products under Development by Indication

Products under Development by Companies

Products under Development by Universities/Institutes

Nicotinamide Phosphoribosyltransferase (Visfatin or Pre B Cell Colony Enhancing Factor 1 or NAMPT or EC 2.4.2.12) - Therapeutics Assessment

Assessment by Mechanism of Action

Assessment by Route of Administration

Assessment by Molecule Type

Nicotinamide Phosphoribosyltransferase (Visfatin or Pre B Cell Colony Enhancing Factor 1 or NAMPT or EC 2.4.2.12) - Companies Involved in Therapeutics Development

AbbVie Inc

Angelini Group

Aurigene Discovery Technologies Ltd

Calico LLC

Eli Lilly and Co

Genentech Inc

Karyopharm Therapeutics Inc

OncoTartis Inc
