Peroxisome Proliferator Activated Receptor Delta - Pipeline Review, H2 2019

SUMMARY

Peroxisome Proliferator Activated Receptor Delta (NUC1 or Nuclear Hormone Receptor 1 or Nuclear Receptor Subfamily 1 Group C Member 2 or Peroxisome Proliferator Activated Receptor Beta or NR1C2 or PPARD) - Peroxisome proliferator-activated receptor delta is a nuclear receptor that in humans is encoded by the PPARD gene. PPAR-delta is a nuclear hormone receptor that governs a variety of biological processes and involved in the development of several chronic diseases, including diabetes, obesity, atherosclerosis, and cancer. The expression of this gene is found to be elevated in colorectal cancer cells. The elevated expression can be repressed by adenomatosis polyposis coli (APC), a tumor suppressor protein involved in the APC/beta-catenin signaling pathway.

Peroxisome Proliferator Activated Receptor Delta (NUC1 or Nuclear Hormone Receptor 1 or Nuclear Receptor Subfamily 1 Group C Member 2 or Peroxisome Proliferator Activated Receptor Beta or NR1C2 or PPARD) pipeline Target constitutes close to 17 molecules. Out of which approximately 14 molecules are developed by companies and remaining by the universities/institutes. The molecules developed by companies in Phase III, Phase II, Phase I and Preclinical stages are 4, 4, 2 and 4 respectively. Similarly, the universities portfolio in Preclinical and Discovery stages comprises 2 and 1 molecules, respectively.
