Proto Oncogene Tyrosine Protein Kinase Src (Proto Oncogene c Src or pp60c src or SRC or EC 2.7.10.2) - Pipeline Review, H1 2017

SUMMARY

Proto Oncogene Tyrosine Protein Kinase Src (Proto Oncogene c Src or pp60c src or SRC or EC 2.7.10.2) - Proto-oncogene tyrosine-protein kinase Src or proto-oncogene c-Src is a non-receptor tyrosine kinase protein that is encoded by the SRC gene. It participates in signaling pathways that control a diverse spectrum of biological activities including gene transcription, immune response, cell adhesion, cell cycle progression, apoptosis, migration, and transformation. Due to functional redundancy between members of the SRC kinase family, identification of the specific role of each SRC kinase is very difficult. It plays a role in the activation of other protein tyrosine kinase (PTK) families. It plays an important role in the regulation of cytoskeletal organization through phosphorylation of specific substrates such as AFAP1.

Proto Oncogene Tyrosine Protein Kinase Src (Proto Oncogene c Src or pp60c src or SRC or EC 2.7.10.2) pipeline Target constitutes close to 12 molecules. Out of which approximately 11 molecules are developed by companies and remaining by the universities/institutes. The molecules developed by companies in Phase III, Phase II and Preclinical stages are 1, 5 and 5 respectively. Similarly, the universities portfolio in Preclinical stages comprises 1 molecules, respectively.
