SUMMARY

RAF Proto Oncogene Serine/Threonine Protein Kinase (Proto Oncogene c RAF or RAF1 or EC 2.7.11.1) - RAF proto-oncogene serine/threonine-protein kinase or proto-oncogene c-RAF is an enzyme is encoded by the RAF1 gene. Once activated the cellular RAF1 protein can phosphorylate to activate the dual specificity protein kinases MEK1 and MEK2 which in turn phosphorylate to activate the serine/threonine specific protein kinases, ERK1 and ERK2. It plays an important role in the control of gene expression involved in the cell division cycle, apoptosis, cell differentiation and cell migration.

RAF Proto Oncogene Serine/Threonine Protein Kinase (Proto Oncogene c RAF or RAF1 or EC 2.7.11.1) pipeline Target constitutes close to 22 molecules. Out of which approximately 16 molecules are developed by companies and remaining by the universities/institutes. The molecules developed by companies in Phase III, Phase II, Phase I, Preclinical and Discovery stages are 1, 6, 3, 5 and 1 respectively. Similarly, the universities portfolio in Preclinical and Discovery stages comprises 4 and 2 molecules, respectively. Report covers products from therapy areas Oncology and Genetic
