SUMMARY

Tyrosine Protein Kinase JAK3 (Janus Kinase 3 or Leukocyte Janus Kinase or JAK3 or EC 2.7.10.2) pipeline Target constitutes close to 36 molecules. Out of which approximately 36 molecules are developed by Companies. The latest report Tyrosine Protein Kinase JAK3 - Pipeline Review, H2 2020, outlays comprehensive information on the Tyrosine Protein Kinase JAK3 (Janus Kinase 3 or Leukocyte Janus Kinase or JAK3 or EC 2.7.10.2) targeted therapeutics, complete with analysis by indications, stage of development, mechanism of action (MoA), route of administration (RoA) and molecule type.

Tyrosine Protein Kinase JAK3 (Janus Kinase 3 or Leukocyte Janus Kinase or JAK3 or EC 2.7.10.2) - Tyrosine-protein kinase JAK3 is an enzyme encoded by the JAK3 gene. It is involved in various processes such as cell growth, development, or differentiation. Mediates essential signaling events in both innate and adaptive immunity and plays a crucial role in hematopoiesis during T-cells development. It plays a pivotal role in signal transduction via its association with type I receptors sharing the common subunit gamma such as IL2R, IL4R, IL7R, IL9R, IL15R and IL21R. Following ligand binding to cell surface receptors phosphorylates specific tyrosine residues on the cytoplasmic tails of the receptor, creating docking sites for STATs proteins. The molecules developed by companies in Pre-Registration, Phase III, Phase II, Phase I, IND/CTA Filed, Preclinical and Discovery stages are 2, 4, 7, 2, 2, 16 and 3 respectively.

Report covers products from therapy areas Immunology, Dermatology, Gastrointestinal, Musculoskeletal Disorders, Oncology, Respiratory, Infectious Disease, Ophthalmology, Cardiovascular and Central Nervous System which include indications Rheumatoid
