## **Abstracts**

The Global Bread Maker Market was valued at USD 440.2 million in 2024 and is projected to experience a steady growth trajectory, expanding at a CAGR of 5.2% from 2025 to 2034. This growth is being driven by an increasing consumer preference for homemade bread, particularly among those seeking healthier, fresher, and preservative-free options. As more individuals look for ways to control the ingredients in their food, the demand for bread makers has surged. These devices provide a convenient solution for preparing fresh, homemade bread, catering to the growing DIY baking trend. Health-conscious consumers are becoming more aware of the benefits of home baking, and bread makers are emerging as an essential tool for anyone passionate about wellness and natural ingredients.

The market is segmented by product type into vertical and horizontal bread makers. Vertical bread machines led the market in 2024, contributing USD 267.1 million in sales. They are expected to continue expanding at a CAGR of 5.4% during the forecast period. Their compact design, which makes them perfect for small kitchens, and their ability to bake taller loaves have made vertical bread makers a favorite among consumers with limited counter space. These machines are also recognized for their energy efficiency, cost-effectiveness, and ease of use. They are an ideal choice for cost-conscious buyers and urban dwellers who appreciate the convenience of quick storage and easy cleaning.

When it comes to operational mode, automatic bread makers dominated the market in 2024, holding a 67.6% share. These devices are expected to maintain strong growth, with a projected CAGR of 5.5% from 2025 to 2034. Automatic bread makers simplify the baking process by managing essential tasks such as kneading, rising, and baking with minimal effort from the user. This convenience makes them particularly appealing to

busy households and working professionals, who can enjoy the benefits of fresh, homemade bread without the time commitment typically associated with baking. The user-friendly functionality and time-saving features of automatic models continue to make them a popular choice, further boosting their demand.

In the United States, the bread maker market was valued at USD 109.4 million in 2024 and is expected to experience steady growth in the coming years. The rising popularity of home baking, especially among health-conscious consumers, is contributing to the demand for bread makers in the region. With an advanced retail network, both online and offline, the U.S. ensures easy access to these appliances for a broad consumer base. Additionally, growing awareness about healthier eating habits, combined with the increasing desire for fresh, homemade bread, is expected to support the continued expansion of the market in North America.
