Abstracts

The Global Building Twin Market was valued at USD 1.8 billion in 2023 and is projected to grow at a CAGR of 25.5% from 2024 to 2032. This growth is primarily driven by an increasing emphasis on smart building technologies, digital transformation, and enhancing operational efficiency. As businesses recognize the potential of building twin solutions, they are making substantial investments and pursuing strategic acquisitions to bolster their market presence and capabilities. The rising interest in digital twin technology is a significant factor contributing to the expansion of the building twin market. Organizations are eager to develop comprehensive digital replicas of their physical assets, which has led to a growing demand for sophisticated solutions.

These technologies enable real-time monitoring and simulation, allowing stakeholders to make well-informed decisions about building management, maintenance, and operations. The market is segmented by components into software and services. In 2023, the software segment was valued at over USD 1.1 billion, reflecting a strong demand for advanced building management platforms that seamlessly integrate with existing systems. These software solutions utilize cutting-edge technologies, including artificial intelligence and machine learning algorithms, to analyze real-time conditions within buildings and optimize operations.

By offering actionable insights and data-driven recommendations, these platforms empower facility managers to enhance energy efficiency, lower operational costs, and improve the overall experience for occupants. Applications of building twin technology include security management, operations and maintenance, space management, facility management, and smart automation, among others. The operations and maintenance segment is expected to grow at a CAGR exceeding 20% from 2024 to 2032. This growth is fueled by a rising demand for predictive maintenance and enhanced

operational efficiency in buildings globally. As organizations strive to minimize downtime and reduce maintenance expenses, predictive analytics has become an essential tool for identifying potential issues before they develop into costly failures.

North America leads the global building twin market, holding a substantial share of over 35% in 2023. The region's growth is supported by the presence of major technology companies and a dynamic startup ecosystem. With significant investments in research and development and early adoption of innovative technologies, North America has established itself as a frontrunner in building twin advancements. The increasing focus on energy efficiency and sustainability, along with the necessity for improved operational efficiency in buildings, is driving the widespread adoption of building twin solutions across various industries, including real estate and construction.
