Abstracts

The Global CAR T-Cell Therapy Market, valued at USD 4.3 billion in 2024, is projected to experience a robust growth trajectory, with an impressive CAGR of 30.5% from 2025 to 2034. Chimeric Antigen Receptor (CAR) T-cell therapy is revolutionizing cancer treatment, marking a significant milestone in oncology. This advanced form of immunotherapy involves the genetic modification of a patient's T-cells to better target and eliminate cancer cells. CAR T-cell therapy is not only offering new hope for patients but also changing the way we approach the treatment of certain cancers. With its growing adoption and advancements in technology, this market is poised for continuous expansion.

The global market is divided into several key products, including Abecma, Breyanzi, Carvykti, Kymriah, Tecartus, Yescarta, and others. Among these, Yescarta stands out as the market leader, capturing 32.5% of the total market share in 2024. The primary reason for Yescarta's market dominance lies in its proven effectiveness for patients with B-cell lymphomas, particularly in relapsed or refractory cases where traditional treatments often fall short. As more patients seek alternatives for aggressive forms of cancer, the demand for Yescarta continues to grow, further cementing its leadership in the space.

In terms of indications, the CAR T-cell therapy market is categorized into leukemia, lymphoma, multiple myeloma, and others, with lymphoma generating the highest revenue of USD 2.4 billion in 2024. Diffuse large B-cell lymphoma (DLBCL), a common form of non-Hodgkin lymphoma is a major contributor to this growth. DLBCL's high relapse rates following conventional therapies have driven demand for CAR T-cell treatments, which have shown remarkable efficacy in targeting and treating aggressive

lymphoma. As a result, CAR T-cell therapies are increasingly viewed as a vital solution in managing these challenging cancer types, offering new hope to patients with few options left.

The U.S. CAR T-cell therapy market is expected to reach USD 25 billion by 2034, with strong growth fueled by supportive regulatory frameworks. The U.S. Food and Drug Administration (FDA) has played a key role in the rapid development and commercialization of CAR T-cell therapies, providing critical regulatory support through expedited approval processes such as Breakthrough Therapy Designations, Orphan Drug status, and Fast Track pathways. These initiatives have fast-tracked the availability of CAR T-cell therapies, ensuring timely access for patients in need of life-saving treatments.
