The Global Grouts And Anchors Market was valued at USD 5.4 billion in 2024 and is estimated to grow at a CAGR of 6.8% to reach USD 10.4 billion by 2034. Market expansion is strongly tied to increased urbanization, a surge in construction activity, and the growing emphasis on infrastructure resilience. Grouts and anchors are essential materials that ensure structural integrity by stabilizing foundations, securing fixtures, and filling gaps across both modern construction and retrofitting projects. These components are foundational to the safety and longevity of civil infrastructure, including commercial buildings, bridges, tunnels, and more.

As global investments in residential, commercial, and public infrastructure accelerate, so does the demand for high-performance and durable construction materials. The growing preference for technologically advanced and easy-to-apply anchoring and grouting solutions is also shaping the industry. Additionally, the push for compliance with evolving building codes and safety regulations continues to drive market momentum across both developed and emerging economies.

The grouts segment dominated with a 54.3% market share in 2024, as these materials are widely used to stabilize structures, fill cavities, and improve load distribution. Known for their strength and adaptability, grouts are essential for structural rehabilitation, foundation reinforcements, and demanding construction tasks requiring durability and precision. Their long-term reliability makes them the go-to solution in both small-scale repairs and large-scale infrastructure projects.

The construction segment held a 39.5% share in 2024, owing to constant global demand for residential, industrial, and commercial developments. As builders aim for

longer-lasting, code-compliant buildings, they are turning to high-quality grouting and anchoring products to meet performance and safety expectations. The shift toward sustainable construction materials is also playing a role in reinforcing the use of advanced grouts and anchors in modern building practices.

U.S. Grouts and Anchors Market held an 88.7% share and generated USD 1.2 billion in 2024. This leadership position stems from large-scale investments in infrastructure upgrades and new construction across the country. Ongoing federal infrastructure initiatives are sustaining the demand for reliable grouting and anchoring materials that offer strength, longevity, and improved resilience. As infrastructure ages and climate resilience becomes critical, builders continue to seek high-performance products that align with evolving structural demands.

Key players shaping the Global Grouts and Anchors Market include Hilti AG, MAPEI S.p.A., Sika AG, BASF SE, and Fosroc International. To strengthen their market position, leading companies in the grouts and anchors space are focusing on several strategic initiatives. These include expanding R&D to develop innovative materials with faster curing times, higher durability, and sustainability features. Many are investing in product customization and advanced chemical formulations to meet the needs of specific construction applications. Strategic mergers, regional partnerships, and acquisitions are also common approaches to widen their geographical footprint. Furthermore, companies are emphasizing on training programs for contractors to boost product adoption and ensure proper application, while integrating digital tools for precise formulation recommendations and project planning.
