## Abstracts

The Global Ice Cream Maker Market, valued at USD 1.76 billion in 2024, is projected to grow at a CAGR of 5.5% from 2024 to 2034. This growth is attributed to the rising demand for homemade desserts, personalized food options, and premium ice cream products. Consumers are showing increased interest in creating frozen treats at home, prioritizing control over ingredients and flavors to meet specific dietary needs. The popularity of dairy-free, vegan, low-calorie, and organic options has further fueled this trend. Technological advancements, such as improved compressors, faster preparation times, and user-friendly features, have made these appliances more accessible to a broader audience.

Demand for high-quality, fresh, and artisanal ice cream is also driving market growth. As people opt for greater control over ingredients, ice cream makers offer an appealing solution. These machines enable the preparation of customized treats, catering to various preferences. The introduction of advanced models has simplified the process, making homemade ice cream production easier than ever.

The market is segmented by type into countertop, portable, hand-cranked, frozen yogurt makers, and others. Countertop ice cream makers led the segment with USD 660 million in revenue in 2024 and are projected to reach USD 1.17 billion by 2034. These models feature built-in compressors for convenience and consistent results. Portable machines, designed for mobility and compactness, cater to consumers seeking on-the-go solutions. Hand-cranked makers provide a manual and nostalgic experience, appealing to those who enjoy traditional methods. Frozen yogurt machines focus on yogurt-based recipes and often include features to create healthier frozen treats.

Distribution channels are divided into online and offline. In 2024, offline channels

accounted for 55.18% of the market share, valued at USD 1.54 billion by 2034. Supermarkets, hypermarkets, and electronic stores allow customers to interact directly with products and receive personalized advice. Conversely, online platforms have gained traction due to their convenience, broader product selection, and competitive pricing. E-commerce platforms provide easy access to customer reviews and promotions, further boosting their appeal among buyers.

In North America, the United States remains the dominant player, valued at USD 340 million in 2024 and expected to grow at a CAGR of over 6.2% through 2034. The growing preference for homemade and customizable desserts is driving market demand. Technological progress and the rising influence of e-commerce are expanding the reach of ice cream makers, making them an increasingly popular choice for American households seeking healthier and more personalized dessert options.
