## Abstracts

The Global Lions Mane Mushroom Supplements Market was valued at USD 418.4 million in 2024 and is estimated to grow at a CAGR of 13.5% to reach USD 1.6 billion by 2034.

Interest in these supplements continues to rise as consumers seek natural options that may support cognitive performance, emotional well-being, and healthy aging. Lion's mane, sourced from *Hericium erinaceus*, contains bioactive components such as hericenones, erinacines, glucans, ergothioneine, and other metabolites that are associated with neurological and wellness-focused benefits. Growing awareness of its potential influence on neuronal pathways, antioxidant activity, and inflammatory balance has elevated its prominence in functional nutrition. Although research in humans remains limited, early findings suggesting improvements in cognitive indicators and emotional parameters have strengthened consumer enthusiasm. Increasing concerns about long-term brain health, combined with demographic shifts toward older populations, are accelerating the use of supplements designed to support mental clarity and memory maintenance. The broader movement toward natural wellness, combined with a rising nootropics culture, is expected to sustain long-term market expansion.

The capsules and tablets segment accounted for a 50% share in 2024 and is set to grow at a 13.3% CAGR through 2034. Their popularity stems from ease of use, accurate dosing, and portability, making them appealing to individuals seeking daily neurological and cognitive support without the flavor or preparation efforts associated with other formats.

The cognitive health and nootropic-focused segment held a 45% share in 2024 and is

projected to grow at a CAGR of 13.7% through 2034. Demand continues to strengthen as consumers prioritize mental clarity, memory support, and focus. Lion's mane is widely positioned as a natural brain-support ingredient due to its recognized bioactive compounds that influence neurological processes in preclinical research.

North America Lions Mane Mushroom Supplements Market held a 38% share in 2024 and is anticipated to grow at a 13.6% CAGR through 2034. The region benefits from a strong interest in health optimization, a well-established supplement culture, and rising adoption of natural cognitive support products. A combination of wellness-driven consumers, aging populations, and communities interested in performance enhancement contributes to expanding demand. Online retail visibility, influencer engagement, and targeted brand communication further enhance market penetration.
