Abstracts

The Global Liposuction Devices Market was valued at USD 989 million in 2024 and is projected to grow at a robust CAGR of 10% from 2025 to 2034. Liposuction devices are crucial in cosmetic and plastic surgery for fat removal in targeted body areas, achieved through small incisions and suction techniques. With a surge in demand for aesthetic procedures and body contouring treatments, the market is seeing substantial growth. The rise in disposable incomes and heightened consumer awareness of cosmetic procedures are significant factors driving this expansion. As people increasingly focus on enhancing their appearance, the liposuction devices market is benefiting from a shift towards safer, less invasive body sculpting solutions.

Technological advancements play a pivotal role in shaping the growth trajectory of this market. The introduction of innovative techniques such as laser-assisted liposuction, ultrasound-assisted liposuction, and cryolipolysis has greatly improved the safety, precision, and overall effectiveness of fat removal procedures. These technologies are gaining popularity due to their minimally invasive nature, reduced recovery times, and appealing aesthetic results. As these techniques become more accessible, an increasing number of patients are opting for these advanced treatments, leading to significant market momentum.

In terms of product type, the market is divided into standalone and portable devices, with the standalone segment dominating the market in 2024, accounting for a substantial 65.4% share. These devices are widely used in high-end medical facilities, including hospitals and large cosmetic surgery centers, due to their advanced technology and ability to handle more complex procedures. Standalone devices are preferred for their superior outcomes, particularly for intricate and large-scale fat

removal treatments that require high precision and patient safety.

The market is further segmented by technology, featuring several types of liposuction devices, such as suction-assisted liposuction (SAL), tumescent liposuction, ultrasound-assisted liposuction (UAL), power-assisted liposuction (PAL), water-assisted liposuction (Bodyjet), and laser-assisted liposuction (LAL). In 2024, suction-assisted liposuction (SAL) leads the market, with a dominant revenue share of USD 270.2 million. SAL remains a popular choice due to its simple yet highly effective method of fat removal through manual suction with a cannula. Its established safety profile and effectiveness make it the preferred option for many patients seeking a proven solution to fat removal.

In the U.S., the liposuction devices market is set to experience significant growth, with projections indicating it will reach USD 734.3 million by 2034. This rise is primarily driven by the increasing prevalence of obesity, with more individuals seeking fat removal as part of their weight loss journey. As awareness of the health risks associated with obesity, such as heart disease and diabetes, grows, more consumers are turning to liposuction as a viable option for targeted fat removal. This growing awareness is expected to further fuel demand for these procedures, contributing to the continued expansion of the market.

Contents

CHAPTER 1 METHODOLOGY AND SCOPE

- 1.1 Market scope and definitions
- 1.2 Research design
 - 1.2.1 Research approach
 - 1.2.2 Data collection methods
- 1.3 Base estimates and calculations
 - 1.3.1 Base year calculation
 - 1.3.2 Key trends for market estimation
- 1.4 Forecast model
- 1.5 Primary research and validation
 - 1.5.1 Primary sources
 - 1.5.2 Data mining sources

CHAPTER 2 EXECUTIVE SUMMARY

- 2.1 Industry 360° synopsis

CHAPTER 3 INDUSTRY INSIGHTS

- 3.1 Industry ecosystem analysis
- 3.2 Industry impact forces
 - 3.2.1 Growth drivers
 - 3.2.1.1 Increasing preference for minimally invasive procedures
 - 3.2.1.2 Growing prevalence of chronic diseases
 - 3.2.1.3 Advancements in technology
 - 3.2.1.4 Growing geriatric population
 - 3.2.2 Industry pitfalls & challenges
 - 3.2.2.1 Low awareness and availability of alternative treatment method
 - 3.2.2.2 High treatment cost
- 3.3 Growth potential analysis
- 3.4 Regulatory landscape
- 3.5 Technological landscape
- 3.6 Porter's analysis
- 3.7 PESTEL analysis

CHAPTER 4 COMPETITIVE LANDSCAPE, 2024

- 4.1 Introduction
- 4.2 Company market share analysis
- 4.3 Competitive analysis of major market players
- 4.4 Competitive positioning matrix
- 4.5 Strategy dashboard

CHAPTER 5 MARKET ESTIMATES AND FORECAST, BY PRODUCT TYPE, 2021 – 2034 (\$ MN, UNITS)

- 5.1 Key trends
- 5.2 Standalone
- 5.3 Portable

CHAPTER 6 MARKET ESTIMATES AND FORECAST, BY TECHNOLOGY, 2021 – 2034 (\$ MN)

- 6.1 Key trends
- 6.2 Tumescant liposuction
- 6.3 Ultrasound-assisted liposuction (UAL)
- 6.4 Laser-assisted liposuction (LAL)
- 6.5 Power-assisted liposuction (PAL)
- 6.6 BodyJet or water assisted liposuction (WAL)
- 6.7 Suction-assisted liposuction (SAL)
- 6.8 Other technologies

CHAPTER 7 MARKET ESTIMATES AND FORECAST, BY END USE, 2021 – 2034 (\$ MN)

- 7.1 Key trends
- 7.2 Hospitals
- 7.3 Clinics
- 7.4 Cosmetic surgical centers
- 7.5 Other end use

CHAPTER 8 MARKET ESTIMATES AND FORECAST, BY REGION, 2021 – 2034 (\$ MN, UNITS)

- 8.1 Key trends

8.2 North America

8.2.1 U.S.

8.2.2 Canada

8.3 Europe

8.3.1 Germany

8.3.2 UK

8.3.3 France

8.3.4 Italy

8.3.5 Spain

8.3.6 Switzerland

8.3.7 Netherlands

8.3.8 Denmark

8.3.9 Poland

8.3.10 Sweden

8.4 Asia Pacific

8.4.1 China

8.4.2 Japan

8.4.3 India

8.4.4 Australia

8.4.5 South Korea

8.4.6 New Zealand

8.4.7 Vietnam

8.4.8 Indonesia

8.5 Latin America

8.5.1 Brazil

8.5.2 Mexico

8.5.3 Argentina

8.5.4 Colombia

8.5.5 Chile

8.6 Middle East and Africa

8.6.1 Saudi Arabia

8.6.2 South Africa

8.6.3 UAE

8.6.4 Turkey

CHAPTER 9 COMPANY PROFILES

9.1 Bausch Health Companies

9.2 Cynosure

- 9.3 Euromi
- 9.4 Human Med AG
- 9.5 InMode
- 9.6 INTERmedic Arfran
- 9.7 INVAMED
- 9.8 Johnson & Johnson
- 9.9 LHbiomed
- 9.10 MicroAire
- 9.11 MOLLER Medical GmbH
- 9.12 NOUVAG AG
- 9.13 Sciton
- 9.14 Sisram Medical
- 9.15 Vitruvian Partners
