## Abstracts

The Global Magnetoencephalography Market, valued at USD 223.5 million in 2023, is projected to grow at a robust CAGR of 11.1% from 2024 to 2032. This growth is driven by advancements in neuroscience and the increasing adoption of non-invasive brain imaging solutions for clinical and research purposes.

Rising neurological disorders such as epilepsy, Alzheimer's, and Parkinson's are key factors accelerating market growth. These conditions require advanced diagnostic tools to enhance treatment outcomes. MEG, with its exceptional temporal resolution, offers real-time brain activity mapping, aiding in identifying abnormal neural functions. Its critical role in diagnosing and planning treatments for conditions like epilepsy underscores its growing importance in the medical field.

Expanding research applications further contribute to the market's upward trajectory. MEG's non-invasive capabilities are integral to neuroscience and cognitive studies, providing detailed insights into brain functions such as sensory processing and motor coordination. Increasing funding from governmental and private entities for neuroscience research bolsters the adoption of MEG systems globally.

The market is segmented by product type into cryogenic/conventional systems and optically pumped magnetometer (OPM) systems. The cryogenic systems segment is anticipated to grow at a CAGR of 9.4%, reaching USD 500 million by 2032. These systems, utilizing superconducting quantum interference devices (SQUIDs), remain widely used for their reliability and effectiveness in diagnosing neurological disorders.

Applications of MEG span clinical and research domains, with the clinical segment

accounting for 65% market share in 2023. Its prominence in clinical settings is attributed to its efficacy in diagnosing and managing neurological and psychiatric conditions. The segment is expected to grow as research efforts uncover new clinical applications for MEG technology.

North America dominated the market in 2023, generating USD 88.8 million in revenue. The region's growth, forecasted at a CAGR of 10.5% through 2032, is supported by advanced healthcare infrastructure and substantial investments in neurological research. With rising incidences of brain-related disorders and the presence of leading neuroscience institutions, North America remains a significant contributor to the global MEG market.

Overall, the increasing focus on precision diagnostics, in line with technological advancements, positions the MEG market for sustained growth across clinical and research applications.
