Abstracts

The Global Neonatal Infant Care Market was valued at USD 2.8 billion in 2024 and is estimated to grow at a CAGR of 6.4% to reach USD 5.3 billion by 2034.

The market expansion is driven by the increasing establishment of NICU units, rising government investments in maternal and child healthcare, and the growing incidence of premature births. Advances in neonatal care technology, coupled with heightened awareness of infant mortality and healthcare quality standards, are fueling adoption. The development of portable and non-invasive neonatal care solutions and increased healthcare spending in emerging economies are also key growth contributors. Public health initiatives and international grants support access to neonatal devices, while hospital subsidies and reimbursement policies enable institutions to invest in advanced technology. Collectively, these factors are creating a robust environment for the adoption of neonatal infant care devices globally.

In 2024, the thermoregulation devices segment accounted for a 25.2% share. Devices such as incubators and radiant warmers maintain optimal body temperature for premature and low-birth-weight infants, preventing hypothermia and related complications. Government support for maternal and child health programs further drives demand for these technologies.

The hospitals segment held a 39.8% share in 2024. As primary users of neonatal care devices, hospitals benefit from specialized NICUs and advanced infrastructure. The rising patient population and consistent government funding encourage continuous upgrades, including ventilators, monitoring systems, and incubators. Hospitals remain central to market growth due to their capacity to integrate comprehensive neonatal

solutions.

North America Neonatal Infant Care Market held 34.1% share in 2024. Strong healthcare infrastructure, increased awareness of infant health, and the presence of advanced NICUs in the U.S. and Canada support market expansion. The rapid integration of AI- and IoT-enabled devices, along with favorable reimbursement policies, further propels adoption.

Key players in the Neonatal Infant Care Market include GE Healthcare, Dräger, Fisher & Paykel Healthcare, Medtronic, ATOM Medical, Masimo, Philips, Phoenix, Inspiration Healthcare Group, Cobams, Natus Medical, David, Novos Medical Systems, Fanem Medical Devices, Pluss, and AVI Healthcare. Companies operating in the Neonatal Infant Care Market are strengthening their position by investing in innovative device technologies, such as AI-driven monitoring systems and portable care solutions. They focus on strategic collaborations with hospitals and healthcare providers to expand distribution networks and increase market penetration. Continuous R&D initiatives enhance product reliability, energy efficiency, and usability, ensuring compliance with regulatory standards.
