Abstracts

The Global Pet Wheelchair Market generated USD 519.2 million in 2024 and is projected to grow at a CAGR of 7.2% between 2025 and 2034. Several factors are fueling this growth, particularly the increasing number of pets suffering from mobility issues such as arthritis, spinal injuries, and degenerative conditions. As more pets face these challenges, the demand for mobility aids like pet wheelchairs continues to rise. Pet owners today view their pets as beloved family members and are more inclined to invest in high-quality products that enhance their pets' quality of life. The rising trend of pet humanization has significantly influenced the market, encouraging pet owners to seek advanced mobility solutions that help their pets regain mobility and independence. Moreover, growing awareness about the availability of specialized pet products is prompting consumers to explore innovative solutions for their aging or injured pets. The willingness of pet owners to spend on premium healthcare products has created a strong market demand, paving the way for continuous innovations in the pet mobility segment.

Technological advancements have also transformed the market landscape. Manufacturers are increasingly using advanced materials and cutting-edge techniques, such as 3D printing, to create lightweight, adjustable, and more durable pet wheelchairs. These innovations offer enhanced comfort, better fit, and greater customization to meet the unique mobility needs of pets. Adjustable wheelchairs are particularly gaining popularity due to their versatility, allowing modifications in height, width, and length to accommodate pets of different sizes and varying degrees of mobility impairment. This adaptability makes them an ideal solution for pet owners seeking personalized mobility aids for their pets. Additionally, the growing interest in specialized pet care products is contributing to the expansion of the pet wheelchair market, as consumers become more aware of the benefits of customized solutions. The adjustable pet wheelchair segment generated USD 390.6 million in 2024, reflecting

its dominance in the market. Pet owners prefer these wheelchairs because they provide flexibility and can be tailored to fit pets of different sizes and breeds. Non-adjustable wheelchairs, while available, account for a smaller share of the market due to their fixed dimensions and limited adaptability. As for pet types, the dog segment held a commanding 72.1% share of the market in 2024. Dogs' widespread popularity, coupled with their larger share of the veterinary healthcare market, has led to higher revenue from this segment. The trend of pet humanization further contributes to this dominance, as dog owners are more likely to invest in premium mobility aids.

The US pet wheelchair market generated USD 186.7 million in 2024, driven by a well-established veterinary healthcare system and high levels of pet ownership. As pet spending continues to rise, fueled by the growing emphasis on enhancing pet well-being, the US market is expected to witness sustained growth, contributing significantly to the overall expansion of the pet wheelchair industry.
