## Abstracts

The Global Physical Therapy Software Market was valued at USD 1.1 billion in 2023 and is projected to expand at a CAGR of 9.7% from 2024 to 2032. Key factors driving this growth include the increasing incidence of musculoskeletal disorders (MSDs) and a rising demand for physical therapy services. The rise in musculoskeletal conditions such as arthritis, back pain, and repetitive strain injuries is significantly contributing to the demand for physical therapy. As more patients turn to physical therapy as a treatment option, healthcare providers are adopting specialized software to improve patient management, enhance care quality, and streamline administrative tasks.

The market is divided based on device type into desktop & laptop and mobile & tablet. In 2023, the desktop & laptop segment led the market, accounting for USD 633.8 million. These platforms are preferred for physical therapy software due to their greater processing power, which supports complex features like data analytics and real-time reporting. Desktops and laptops provide larger screens and more robust hardware, making them better suited for managing extensive data entry and performing detailed tasks than mobile devices.

The deployment segment is split into cloud-based and on-premises solutions. The cloud-based segment is expected to reach USD 1.6 billion by 2032. Cloud software offers significant flexibility, allowing therapists and patients to access and manage data remotely. This is particularly valuable for telehealth services, enabling therapists to continue providing care beyond traditional settings. Additionally, cloud solutions eliminate the need for costly hardware and ongoing maintenance, making them a more affordable and scalable option for healthcare practices, especially smaller clinics with limited resources.

In terms of application, the market is divided into patient management, billing and insurance, exercise program management, and other functions. The patient management segment was the market leader in 2023, holding a 35.7% share. This software allows physical therapists to store and manage comprehensive patient records, including treatment histories, progress notes, and appointments, thus enhancing workflow efficiency and the quality of care.

The U.S. was the leading contributor to the North American physical therapy software market in 2023, generating USD 382.3 million in revenue. The demand for physical therapy software in the U.S. is expected to grow steadily due to the prevalence of chronic pain and musculoskeletal conditions, which increases the need for efficient patient data management and treatment planning. Furthermore, the growing acceptance of telehealth and the adoption of advanced digital platforms in healthcare are expanding the use of physical therapy software, particularly for remote and hybrid therapy models.
