## Abstracts

The Global Resectoscope Devices Market, valued at USD 402.2 million in 2024, is anticipated to grow at a robust CAGR of 5.7% between 2025 and 2034. This growth is driven by the rising prevalence of urological and gynecological conditions and an increasing preference for minimally invasive surgical procedures. Continued advancements in surgical technologies and techniques are further propelling the adoption of resectoscope devices in healthcare facilities worldwide.

By type, the market is segmented into monopolar, bipolar, and hybrid resectoscopes. Monopolar resectoscopes are expected to see significant growth, with a projected CAGR of 5.5%, reaching a market value of USD 327.3 million by 2034. These devices are widely favored for their efficiency and cost-effectiveness, particularly in transurethral and gynecological surgeries. Their affordability compared to bipolar systems makes them an attractive option for healthcare providers in both developed and emerging regions, ensuring their sustained market dominance over the coming years.

The market is also segmented by end use, including hospitals, clinics, ambulatory surgical centers, and other healthcare providers. Hospitals accounted for a leading 45.6% share of the market in 2024, bolstered by their advanced surgical infrastructure and integration of cutting-edge imaging technologies. The presence of specialized professionals such as urologists and gynecologists ensures precision and safety during procedures, solidifying hospitals as the top choice for resectoscope device applications. Their ability to handle both complex and minimally invasive surgeries further enhances their position in the market.

In the United States, the resectoscope devices market was valued at USD 148.7 million

in 2024, with a projected CAGR of 4.9% through 2034. The country's well-established healthcare infrastructure, widespread adoption of advanced surgical equipment, and the presence of key market players are driving its dominance. Additionally, factors such as increased healthcare spending, a growing elderly population, and rising demand for minimally invasive surgeries contribute to sustained market growth in the U.S.
