## Abstracts

Spain Nicotine Pouches Market generated USD 150.8 million in 2024 and is projected to grow at a robust CAGR of 18.2% between 2025 and 2034. The market is experiencing significant growth due to increasing consumer awareness of the health risks associated with smoking. As more Spanish consumers seek safer alternatives, nicotine pouches have gained traction as a smokeless and discreet option that delivers nicotine without the harmful effects of traditional tobacco products. These pouches are becoming increasingly popular among individuals looking to reduce or quit smoking, making them a preferred choice in the Spanish market. Moreover, the growing trend of health consciousness, coupled with government initiatives to discourage smoking, has further accelerated the shift toward healthier nicotine consumption methods.

The expanding product variety is another factor propelling the growth of the nicotine pouches market in Spain. Manufacturers are introducing a wide range of flavors, including mango, citrus, and berry, to appeal to a diverse consumer base. These innovative flavors not only attract new users but also enhance the overall experience for existing consumers. Many former smokers and vapers prefer flavored nicotine pouches as they offer a smoother and more enjoyable alternative to the harsh taste of tobacco. Additionally, the availability of diverse flavors helps convert hesitant consumers who may be reluctant to try traditional nicotine products. This trend is expected to continue driving demand and expanding the market in the coming years.

The market is segmented into flavored and non-flavored categories, with flavored nicotine pouches dominating the market. In 2024, the flavored segment accounted for USD 150.8 million, reflecting its strong appeal among consumers. Flavored pouches offer a more pleasant and palatable experience, making them especially popular among those transitioning from smoking or vaping. The ability to mask the strong taste of nicotine with appealing flavors contributes to their growing demand. As a result,

manufacturers are focusing on expanding their flavor portfolios to meet evolving consumer preferences and sustain market growth.

Consumer demographics reveal that men hold a significant share of the Spain nicotine pouches market, with a 68% share in 2024. Historically, men have exhibited higher nicotine consumption rates compared to women, driven by social, psychological, and habitual factors. Nicotine pouches offer men a convenient, smokeless, and discreet alternative that aligns with their preference for a more versatile and socially acceptable nicotine source. The ability to use pouches in various settings, including social and professional environments, further contributes to their popularity among male consumers.

As the Spain nicotine pouches market continues to grow, factors such as increasing product innovation, growing consumer awareness, and a shift towards healthier alternatives are expected to sustain momentum. The evolving preferences of consumers and a heightened focus on providing a diverse range of flavors and discreet options are likely to drive market expansion in the coming decade.
