Abstracts

Automated medication dispensing systems (AMDS), also termed as automated drug cabinet (ADC), are robotic pharmacy prescription dispensing devices, which allow automatic or semi-automatic drug-storage and medicine dispense. Designed for use at hospital and retail pharmacies, these systems reduce medication errors, control inventory costs, improve access to drug information at point of care, and allow for the configuration of systems to meet specific clinical and operational requirements. Global total sales revenue of AMDS will advance to \$XXX billion in 2025, registering a CAGR of XX% between 2016 and 2025. This represents a cumulative revenue of \$26.48 billion during 2017-2025 owing to a substantial adoption of automated medication dispensing systems in hospital pharmacies, retail drug stores and other types of pharmacies across the globe.
