Abstracts

Technological advancement of robotic gastrointestinal surgery will continue to create smarter and more efficient assistive tools and devices to meet the needs of gastrointestinal surgery procedures across the globe. Compared with traditional minimally invasive surgery approaches, robot-assisted surgery gives the surgeon better control over the surgical instruments and a better view of the surgical site. Current open gastrointestinal surgeries and procedures can be replaced largely by robotic minimally invasive surgery (RMIS) during the years to come. It is expected to see that many more gastrointestinal surgery procedures will be undertaken with at least some aspects of surgical robotics owing to the fast adoption of the advanced RMIS technology in hospitals and clinical centers. Global demand for robotic gastrointestinal surgery in 2025 will advance to \$1.41 billion. This represents a XX% increase yearly in terms of annual revenue between 2016 and 2025, and a cumulative market total of \$XXX billion during 2017-2025 driven by the substantial increase of robot-assisted gastrointestinal surgery procedures.
