## Abstracts

Work-class remotely operated vehicles (ROVs) are large enough unmanned underwater vehicles to carry additional sensors and/or manipulators. These vehicles commonly have a multiplexing capability that allows additional sensors and tools to operate without being 'hard-wired' through the umbilical system. These ROVs are generally larger and more powerful than observation mini ROVs. The evolution of ROV technology has resulted in the ever-growing application of work class ROVs in oil & gas industry, military/defense, scientific research and other sectors. Global total Capex (capital expenditure) of work class ROVs in 2025 will advance to \$XXX billion, registering a CAGR of 9.3% between 2016 and 2025. This represents a cumulative Capex of \$XXX billion during 2017-2025 owing to a substantial adoption of work class ROVs for drilling support, construction support, as well as inspection, repair and maintenance (IRM) activities across the globe.
