Abstracts

This report focuses on systematic evaluation and analysis of Internal Risks (arising within the industry development itself) and External Risks (arising from the surrounding environments) in China's smartphone production industry and consumption market. The major internal risks recognized in this industry include industry growth stage, industry competition pressure, market entry barriers, industry volatility, and technology challenge. The major external risks include factors like profit decline, regulation force, dependence on imports, and other risks (namely shortage of upstream supply, competition from substitutes, and purchase potential decrease).

The risk evaluation and threat rating concentrate on mainland China's smartphone market under the industry conditions and environments in 2014. Forecasts and projections have been performed for the trend of industry risk over the next five years (2014-2019). All the identified risk factors are measured quantitatively according to GMD's novel numeric system, i.e. each risk is evaluated with GMD Risk Index Number (GMD RIN) and GMD Risk Intensity Level (GMD RIL). These in-depth appraisals and analysis about risk considerations & controls provide a comprehensive understanding of the current risk factors and likelihood of risk development trends. Moreover, this report also concludes Critical Success Factors (CSFs) and novel strategies to help identify fresh growth point and overcome the threats and obstacles of doing manufacture/business in China's smartphone industry.
