3D Dental Scanners Market Summary

The global 3D dental scanners market size was estimated at USD 1.99 billion in 2024 and is projected to reach USD 4.36 billion by 2033, growing at a CAGR of 9.20% from 2025 to 2033. The demand for 3D dental scanners is increasing owing to the increasing burden of oral diseases and the rising demand for cosmetic procedures in dentistry.

In addition, increasing tourism for oral procedures is also expected to propel market growth. The increasing burden of oral disorders, such as periodontal disease, tooth decay, plaque, and oral cancer, is anticipated to drive the demand for 3D dental scanners. According to WHO data published in March 2025, more than 1 billion people suffer from severe periodontal disease worldwide. Furthermore, according to the 2022 WHO Global Oral Health Status Report, oral diseases impact around 3.5 billion individuals across the globe. These statistics highlight the growing demand for dental procedures. 3D scans are used for complex procedures requiring a full view of the jaw, mouth, and nerves. They provide better accuracy for treatment planning and diagnosis. Thus, the increasing burden of oral diseases is anticipated to propel the growth of the 3D dental scanners industry over the forecast period.

Moreover, the increasing incidence of oral cancer is expected to further boost the demand for 3D dental scanners. According to the study published by the MDPI in May 2025, Cone Beam Computed Tomography (CBCT) is used in oral cancer radiation

therapy to verify patient positioning and assess tumor changes during treatment. In addition, bone invasion assessment is another indication of using CBCT in treating oral cancer. CBCT has also been used to evaluate complications related to oral cancer treatment. Thus, such wide use of CBCT in oral cancer, coupled with the growing burden of oral cancer, is anticipated to drive the demand for CBCT scanners in the coming years.
