Abdominal Pads Market Growth & Trends

The global abdominal pads market size is expected to reach USD 1.5 billion, registering a CAGR of 6.1% from 2023 to 2030, based on a new report by Grand View Research, Inc., Increasing awareness among the people about wound management, a growing number of surgical procedures globally, and rising global elderly population are the growth driving factors. Furthermore, increasing cases of burn injuries is also expected to drive market growth. For instance, as per the World Health Organization, annually, more than five million people are listed as severely or moderately burnt.

The COVID-19 outbreak has hampered regular wound management procedures resulting in a decline in hospital attendance, postponed surgical services, and delayed or canceled surgical and other non-emergency procedures. The global market for wound management was significantly impacted by the pandemic's first wave. According to the article by Annals of Surgery, the pandemic has caused a disruption in the provision of surgical services, with an estimated 28.0 million elective surgeries worldwide being postponed during the first COVID-19 wave along with the cancellation of diagnostic and therapeutic treatments. However, after the cancellation of the lockdown and decline in the COVID-19 cases the hospitals and healthcare infrastructure is getting back to normal.

The key companies are attempting to enhance their product portfolio by upgrading their products, employing significant cooperative efforts, and considering acquisitions in addition to government permissions to increase their client base and capture a larger share of the abdominal pads market.
