### **Advanced Wound Dressing Market Growth & Trends**

The global advanced wound dressing market size is expected to reach USD 10.5 billion by 2030, registering a CAGR of 4.5% according to a new report by Grand View Research, Inc. An increasing number of accidents, the impact of COVID-19, and technological advancements are the key driving factors for the market. The increasing incidence of accidents such as road accidents, burns, and trauma events across the globe is anticipated to drive the market. For instance, as per the WHO (2018), around 1,000,000 people are severely or moderately burnt in India per year. In addition, as per NCBI, in 2017, countries such as Bulgaria, Finland, the Netherlands, China, Australia, and the U.K. reported a rise in the incidence of burn injuries.

Furthermore, as per the American Association for the Surgery of Trauma, in 2017, around 1.2 million people died globally, accounting for the deaths of around 3,242 people per day in road accidents every year. Road accidents mostly occur in middle- or low-income countries. The advanced wound dressing is majorly used for the faster healing of all kinds of burns injuries. Moreover, bandages and gauze are also used for the treatment of minor injuries. Thus, the rising number of accidents is expected to boost the demand for advanced wound dressing, which is expected to lead to considerable market growth over the forecast period.

The rising number of surgical procedures is also expected to boost the demand for home healthcare services. According to the American Society for Metabolic and Bariatric Surgery (ASMB) in 2018, the number of people who underwent sleeve gastrectomy increased by 8.05% from 2016 to 2017 in the U.S. Patients undergoing surgeries are required to stay at hospitals for a longer period; thus, most patients prefer home healthcare services over hospital stays. Therefore, these factors are likely to boost the demand for home healthcare services, thereby fueling market growth during the forecast period.
