Abstracts

The global aesthetic breast surgery market size was valued at USD 3.0 billion in 2025 and is projected to grow from USD 3.2 billion in 2026 to USD 4.8 billion by 2033, at a CAGR of 6.2% from 2026 to 2033. North America dominated the market, accounting for the largest revenue share of 37.2% in 2025. The growth of the global aesthetic breast surgery industry is driven by the increasing demand for both cosmetic and reconstructive breast procedures, rising awareness of body aesthetics, and growing acceptance of plastic surgery across developed and emerging economies.

Consumers are opting for breast augmentation, breast lift (mastopexy), and breast reconstruction to improve body contour, restore breast shape, and enhance overall appearance. Continuous advancements in breast implants, minimally invasive surgical techniques, and personalized treatment approaches are further supporting market growth. For instance, in February 2025, Establishment Labs launched Preserv? in Brazil, marking the first commercial rollout of its minimally invasive breast augmentation platform. The system integrates proprietary surgical instruments with Ergonomix2 breast implants to preserve breast tissue, reduce recovery time, and provide more natural aesthetic outcomes, with broader global expansion planned in subsequent years. Such innovations are expected to accelerate the adoption of advanced aesthetic breast surgery procedures and support long-term market growth.

“Historically, many women have not been convinced by traditional methods and legacy techniques,” Mr. Chacón-Quirós said. “With Mia and Preserv?, we have solutions that address these concerns. The technology platform of breast tissue preservation allows plastic surgeons to create natural results with less disruption of the patient’s breast tissue. By improving safety profiles, recovery times, and achieving the breast aesthetic patients are looking for, breast augmentation may now be possible for women that otherwise never would have considered it - as well as making the decision easier for many who were already considering. After Brazil, Preserv? will rollout globally over the next few years, and this should contribute to top line growth and profitability.”

Number of surgeries/procedure volume analysis

The increasing volume of aesthetic breast surgery procedures performed worldwide is a key factor driving market growth. Rising awareness of cosmetic and reconstructive treatment options, growing acceptance of plastic surgery, and increasing emphasis on body aesthetics have contributed to higher demand for breast augmentation, breast lift (mastopexy), and breast reconstruction procedures. For instance, according to the American Society of Plastic Surgeons (ASPS) Procedural Statistics Report, the number of breast augmentation procedures has shown a consistent upward trend over recent years. The total number of procedures increased from 298,568 in 2022 to 304,181 in 2023, and further to 306,196 in 2024. This substantial global procedure volume highlights the growing demand for both cosmetic and reconstructive breast surgeries.
