Abstracts

The global AI in cardiology market size was estimated at USD 1.69 billion in 2025 and is projected to reach USD 14.83 billion by 2033, growing at a CAGR of 31.17% from 2026 to 2033. The rising global prevalence of cardiovascular diseases, coupled with the increasing focus of cardiac specialists on enhancing diagnostic precision and rapid advancements in cardiac imaging technology, are among the key factors responsible for expanding the applications of artificial intelligence (AI) in cardiology.

For instance, in January 2026, Cleerly, Inc. announced that Aetna expanded coverage for its AI-QCT plaque analysis technology, supporting improved diagnosis and risk assessment of coronary artery disease through advanced AI-enabled coronary imaging and broader clinical adoption across the insured population.

Increasing prevalence of cardiovascular diseases (CVDs)

A primary factor driving the growth of artificial intelligence (AI) in cardiology industry is the increasing prevalence of cardiovascular diseases (CVDs) and the consequent need for efficient & effective healthcare solutions. According to the WHO, CVD remains the leading cause of mortality worldwide. For instance, an estimated 19.8 million people died from CVDs in 2022, representing approximately 32% of all global deaths. Similarly, according to the Centers for Disease Control and Prevention (CDC), 919,032 people died from cardiovascular disease in the U.S. in 2023, equivalent to one in every three deaths. This escalating burden necessitates the development and implementation of

advanced technologies to improve disease management and patient outcomes.

The high prevalence of conditions such as hypertension, coronary artery disease, heart failure, and arrhythmia puts a substantial strain on healthcare systems globally. Traditional diagnostic & treatment methods are often time-consuming & resource-intensive and are likely to lack the precision required for optimal patient care. AI offers a transformative solution by enhancing the accuracy and efficiency of CVD detection, diagnosis, and management.
