### Summary

The global AI in endoscopy market size was valued at USD 2.93 billion in 2024 and is projected to reach USD 19.53 billion by 2033, growing at a CAGR of 26.83% from 2026 to 2033. Increasing global burden of gastrointestinal diseases, including colorectal cancer and inflammatory bowel disease and a significant shift toward minimally invasive endoscopic procedures are significant factors contributing to market growth.

Additionally, rapid advancements in artificial intelligence, particularly in machine learning and computer vision, are driving innovation in the AI endoscopy market. The increasing global burden of gastrointestinal diseases, including colorectal cancer and inflammatory bowel disease, is a primary driver of AI in endoscopy market. For instance, according to the American Cancer Society estimates, in 2024, around 13,920 new small intestine cancer cases were diagnosed in the U.S., and 2,060 individuals died due to small intestine cancer. As the prevalence of small intestine cancer rises globally, there is a growing need for effective diagnostic and treatment procedures. Capsule endoscopy plays a crucial role in offering minimally invasive options to accurately diagnose, stage, and treat various forms of cancer.

Similarly, according to the World Cancer Research Fund, approximately 1.93 million

new cases of colorectal cancer were reported globally in 2022, making it one of the most prevalent malignancies. The World Health Organization further emphasizes that regions such as Europe, Australia, and New Zealand exhibit the highest incidence rates, largely due to lifestyle factors, diet, and aging populations.
