Abstracts

The global allergic conjunctivitis market size was valued at USD 3.3 billion in 2025 and is projected to grow from USD 3.5 billion in 2026 to USD 5.1 billion by 2033, at a CAGR of 5.7% from 2026 to 2033. North America dominated the market, accounting for the largest revenue share of 41.2% in 2025. The allergic conjunctivitis market is supported by the rising prevalence of seasonal and perennial allergies, increasing exposure to environmental allergens such as pollen, dust mites, mold, and air pollution, and growing awareness of eye allergy symptoms among patients and healthcare professionals.

Changes in climate patterns and longer pollen seasons have contributed to a higher number of allergy episodes in many regions, increasing the demand for medical consultation and treatment. The market includes antihistamines, mast cell stabilizers, dual-action agents, corticosteroids, and lubricating eye drops, with prescription and over-the-counter products serving different patient needs. Pharmaceutical companies continue to focus on improving ocular formulations that provide rapid symptom relief and longer duration of action while maintaining safety for repeated use.

Retail pharmacies, hospital pharmacies, and online pharmacies play an important role in product availability. North America accounts for a significant share due to established diagnosis and treatment practices, while the Asia Pacific is witnessing steady growth supported by urbanization, rising healthcare access, increasing allergy awareness, and improving availability of ophthalmic treatments.
