Abstracts

The global alternative veterinary medicine market size was estimated at USD 3.2 billion in 2025 and is projected to reach USD 9.3 billion by 2033, growing at a CAGR of 15.3% from 2026 to 2033. The industry is driven by several key factors, including the growing pet population and increasing humanization of pets, which fuels demand for holistic and natural treatments.

Rising awareness among pet owners about the potential side effects of conventional drugs is prompting interest in alternative therapies such as acupuncture, herbal medicine, chiropractic care, and homeopathy. Moreover, according to an article published by AVMA, in May 2025, an estimated 4,000 to 5,000 veterinarians in the U.S. have completed acupuncture certification through recognized institutions such as Chi University, IVAS, CuraCore, CRI, EBVA, and CIVT. The increasing acceptability and incorporation of acupuncture within conventional veterinary treatment is reflected in the expanding number of qualified professionals. The market for alternative veterinary medicine is growing as more veterinarians use these alternative treatment modalities, which increases their credibility and increases pet owners' confidence and desire for holistic care.

Similarly, according to an article published by The Hindu, in October 2024, the newly released Standard Veterinary Treatment Guidelines (SVTG) by the Union Ministry of

Animal Husbandry are expected to significantly drive the growth of the alternative veterinary medicine market. These guidelines encourage a move toward Ayurvedic and herbal veterinary medications as safer and more environmental friendly alternatives by attempting to limit and restrict the use of antibiotics in the treatment of livestock and poultry. By increasing farmers' and veterinarians' confidence in conventional formulations, this policy initiative promotes broader use in the commercial and rural animal health sectors. Additionally, Government support for Ayurveda in veterinary care is expected to boost investment, research, and development of herbal and plant-based animal health products. This will help the market grow while encouraging safer, more natural, and environmentally friendly ways to care for animals.

Moreover, the growing preference for holistic and non-invasive treatment approaches among pet owners and livestock producers is another crucial factor driving the alternative veterinary medicine market, as it aligns with increasing awareness of animal wellness, reduced side effects, and sustainable care practices. For instance, according to an article published by The Times of India, in March 2026, the Indian Research and Technology Advancement (IRTA) is actively leading research on Ayurvedic veterinary care, exploring the efficacy of herbal formulations and traditional treatment practices for animal health management. Such initiatives aim to scientifically validate age-old remedies used in livestock and companion animal care, particularly for conditions like infections, inflammation, and metabolic disorders. By bridging traditional knowledge with modern research methodologies, IRTA is helping standardize Ayurvedic veterinary treatments, improve acceptance among practitioners, and support regulatory recognition thereby significantly contributing to the growth of the industry.
