Abstracts

The global ambulatory infusion centers market size was estimated at USD 40.9 billion in 2025 and is projected to grow from USD 43.7 billion in 2026 to USD 76.2 billion by 2033, growing at a CAGR of 8.3% from 2026 to 2033. North America dominated the market, accounting for the largest revenue share of 36.8% in 2025. This growth is attributed to the increasing prevalence of chronic diseases, expanding use of specialty infusion therapies, and the shift toward cost-effective outpatient care. Moreover, favorable reimbursement policies, increasing investments in independent infusion centers, and growing patient preference for convenient, accessible, and personalized infusion services are further supporting market expansion.

The section below outlines the key factors driving the growth of the ambulatory infusion centers market, highlighting the rising prevalence of chronic diseases requiring long-term infusion therapies and the growing shift from hospital-based care to cost-effective outpatient settings. It also examines the increasing adoption of specialty biologics and injectable therapies, favorable reimbursement policies, expanding investments in independent infusion centers, and rising patient preference for convenient, accessible, and personalized infusion services.
