Anti-biofilm Wound Dressing Market Growth & Trends

The global anti-biofilm wound dressing market size is expected to reach USD 1.48 billion by 2030, registering a CAGR of 9.6% from 2023 to 2030, according to a new report by Grand View Research, Inc. The rising incidence of Hospital Acquired Infections (HAIs), the growing prevalence of chronic diseases, and the increasing number of burn cases are the key driving factors for the market.

Increasing the prevalence of chronic diseases across the globe is anticipated to drive the market. For instance, as per the International Diabetes Federation, the global prevalence of diabetes is expected to increase from 366.0 million in 2011 to 552.0 million by 2030. Since prolonged diabetes leads to diabetic foot ulcers, thus, the rising prevalence of diabetes is expected to render a positive impact on market growth over the forecast period. The anti-biofilm wound dressing is very much effective in healing chronic injuries, thus, this factor is expected to propel the demand for the product. Furthermore, the increasing geriatric population across the globe is also anticipated to surge the market growth. For instance, as per the World Health Organization (WHO), the global geriatric population is anticipated to rise from 90.0 million in 2016 to 2.0 billion by 2050. Since the geriatric population is prone to chronic diseases and ulcers, thus growing geriatric population is also expected to surge in market grow

th.

Increasing cases of accidents and trauma such as burns are expected to contribute to market growth. Traumatic events are most common in low and middle-income countries in comparison to high-income countries. Around 50.00% of people globally are exposed to fire-related traumas. For instance, as per the WHO, over 1,000,000 people are registered, annually, as moderately or severely burnt. Therefore, such an increase in the number of burn cases is projected to boost the demand for the products, thereby propelling the market growth over the forecast period.

Anti-biofilm Wound Dressing Market Report Highlights

In terms of revenue, the chemical mode of the mechanism segment held the largest share in 2019. An increase in the use of silver anti-biofilm wound dressing in chronic and acute injuries is the major factor driving the segment

The acute wounds segment held the largest market share in 2019 owing to the rising number of surgical procedures across the globe
