Summary

The global anti-pollution nasal spray market size was estimated at USD 8.35 billion in 2025 and is projected to reach USD 13.30 billion by 2033, growing at a CAGR of 6.10% from 2026 to 2033. The high air pollution levels globally, driven by industrialization, urbanization, and rising vehicular emissions, are significantly fueling the growth of the anti-pollution nasal spray market.

As pollutants such as particulate matter (PM_{2.5} and PM₁₀), nitrogen dioxide, sulfur dioxide, and ozone concentrations rise, they significantly irritate and inflame nasal passages. This leads to increased incidences of respiratory conditions such as allergic rhinitis, sinusitis, and asthma, pushing individuals to seek preventive and protective solutions.

According to the European Environment Agency, air pollutant levels in 2021 significantly exceeded the levels specified by the World Health Organization's (WHO) air quality guidelines. Achieving these recommended levels could have prevented a significant number of deaths across EU Member States (EU-27), including 253,000 deaths linked to exposure to fine particulate matter (PM_{2.5}) and 52,000 deaths caused by nitrogen dioxide (NO₂) exposure. In addition, reducing short-term exposure to ozone (O₃) could

have reduced 22,000 attributable deaths.

Similarly, according to the report, Integrated Assessment of Air Pollution and Climate Change for Sustainable Development in Africa, published by Climate and Clean Air Coalition (CCAC), the African Union Commission, and the United Nations Environment Programme (UNEP) in November, by implementing the recommended actions from the Assessment to reduce air pollution and combat climate change, African governments could reduce 200,000 premature deaths annually by 2030 and 880,000 deaths each year by 2063. Thus, the rising pollution level is expected to boost market growth during the forecast period.

Campaigns led by healthcare organizations and governments to educate the public about air pollution's long-term impacts, such as chronic respiratory diseases and reduced lung function, have played a significant role in boosting the adoption of these sprays. For instance, in June 2024, a meeting in Sarajevo brought together representatives from municipalities, civil society, and academia in South-Eastern Europe to share outcomes from five projects addressing climate change, air pollution, and health. Air pollution presents a significant challenge in South-Eastern Europe, primarily due to coal power plants and urban pollution hotspots.
